

Ecclesiastical Latin

Cumulative Memory Workbook

From ordinary first sentences to Missal reading, broad Latin, and advanced composition

A controlled cumulative lexicon, grammar-fact bank, widening retrieval schedule, printable repetition sheets, and complete project models for the twenty-two-packet common trunk and eight-packet poetry branch.

Corpus Ordinary project Latin; classical, biblical, patristic, ecclesiastical, and poetic sources; 1962 *Missale Romanum* as the principal destination

Method Print, annotate, parse, copy, transform, translate, and compose by hand

Pacing Repeat by study event until recall is reasonably dependable in reading and composition

Part I

How to Use the Memory Workbook

CHAPTER 1

Recall by Study Event

This workbook is the cumulative memory companion to the twenty-two-packet common trunk and the eight-packet advanced poetry branch. Its intervals are *study events*: a return happens after later packets have been studied, however much time that takes. Repeat any sheet as often as useful. Write from memory before checking the model, correct visibly, state the reason for each substantive correction, and carry uncertain material forward.

The controlled registry contains 598 lexemes and 81 grammar facts allocated across 30 packet sets. Every packet provides the same eight printable sheet families:

Suffix	Sheet	Work
-S	New-lexeme study	Complete citation form, project gloss, morphology, usage or government, and pedagogical strand
-L2E	Latin to sense	New words plus returns after one, two, and five later packets and at selected stage boundaries
-E2L	Sense to Latin	Complete citation-form reconstruction in the reverse direction
-MORPH	Morphology	Declension, gender, adjective pattern, principal parts, conjugation, or indeclinable class
-GOV	Usage and government	Case government, complement pattern, construction, or lexical warning, followed by an original sentence
-GRAM	Grammar facts	Rule, diagnostic, distinction, or method stated in complete grammatical language
-RECON	Reconstruction	Ordered Latin, complete parsing, and an account of every supplied form
-COMP	Composition	Proposition outline, checked draft, and revision on the way to advanced prose or verse composition

Thus M01-L2E always names the Latin-to-sense sheet for packet M01, and P8-COMP always names the composition sheet at the end of the poetry branch. These stable IDs make a useful personal return list: record the exact sheet and lexeme or grammar-fact IDs that remain uncertain.

1.1 The five recurrence labels

Label	Event	Use
N	New	First deliberate study and immediate retrieval in the packet where the item enters the controlled memory set
R1	One-packet return	Retrieval after one later packet has intervened

R2	Two-packet return	Retrieval after two later packets have intervened
R5	Five-packet return	Wider retrieval after five later packets have intervened
S	Stage return	Deliberately mixed cumulative return near a structural boundary or the close of a branch

The schedule is a floor, not a ceiling. A difficult item can appear on a personal return list at every sitting until it is dependable. An easy item still receives the printed widening returns, because fluent reading depends on rapid availability, not one successful recognition.

1.2 Source and exercise boundary

The English senses in this workbook are concise project-created study glosses. They do not replace a full dictionary entry. A label such as “general and classical prose” or “biblical and liturgical reading” assigns pedagogical work; it does not claim that the registry entry has been collated at a named author, work, edition, and locus. Exact received wording belongs in the course’s passage inventory and source records after verification. Every Latin reconstruction and composition prompt or model in this workbook is project-created instructional material, not an unattributed quotation.

1.3 Before continuing

It is reasonable to continue when the packet’s citation forms, principal senses, essential morphological facts, and constructions can usually be recalled from both Latin and English cues; when its grammar prompts can be explained rather than merely recognized; and when the same material remains available in fresh connected Latin and short composition. Dependable recall matters more than perfect recall. Record what is uncertain and keep it in the return cycle while later reading supplies further encounters.

Part II

Common-Trunk Practice Sheets

CHAPTER 1

M01: Form, Case, and Agreement — practice sheets

Packet memory key: M01. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

1.1 M01-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

ID	Citation form	Project gloss	Morphology	Usage / government
L001	<i>vulpes, vulpis f.</i>	fox	noun; third declension; feminine	learn nominative and genitive together <i>Work:</i> active; <i>pedagogical strand:</i> general concrete Latin. <i>Source state:</i> Project gloss; external lexical locus open (U).

1.2 M01-L2E — Latin-to-sense retrieval

Supply the principal project gloss from memory, then add another sense only if the packet's reading gives evidence for it. Event labels mark first encounter (N), one-packet return (R1), two-packet return (R2), five-packet return (R5), and broad stage return (S).

1.6 M01-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G001	Lemma and printed form <i>dictionary literacy</i>	State the difference between a lemma and a printed word form; give one example.	_____
G002	Phrase and clause <i>sentence structure</i>	Give the deciding difference between a phrase and a clause.	_____
G003	Subject, predicate, and object <i>sentence structure</i>	Define subject, predicate, and direct object without equating the subject with the actor.	_____
G004	A noun's dictionary form <i>dictionary literacy</i>	Write the three pieces normally learned with a noun and say what each supplies.	_____
G005	Case, number, and gender <i>nominal morphology</i>	Explain why these three coordinates must be kept distinct.	_____
G006	Agreement and government <i>nominal syntax</i>	State the difference and give one example of each.	_____

1.7 M01-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Arrange *vulpes / fusca / est* as a complete clause and label subject, copula, and predicate adjective.

Morphology and syntax notes:

1.8 M01-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two transparent clauses about an animal, using one size adjective and one color adjective.

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 2

M02: Noun Systems — practice sheets

Packet memory key: M02. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

2.1 M02-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

3.6 M03-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G009	The neuter rule <i>noun paradigms</i>	State the neuter rule in full.	_____
G013	First/second-declension adjective agreement <i>adjectives</i>	What coordinates does an adjective copy, and what does it not have to copy?	_____
G014	Third-declension adjective entries <i>adjectives</i>	Explain the information in <i>fidelis</i> , <i>fidele</i> and <i>misericors</i> , <i>misericordis</i> .	_____

3.7 M03-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct a giving clause from *agricola* / *panem* / *puero* / *dat* and label both objects.

Morphology and syntax notes:

3.8 M03-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one sentence joining two objects and one sentence containing a place phrase.

Proposition outline:

Draft and revision:

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 4

M04: Being and Present Action — practice sheets

Packet memory key: M04. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

4.1 M04-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

6.7 M06-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Join ability to possession: *puer / librum / habet / legere / potest.*

Morphology and syntax notes:

6.8 M06-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one clause with *sum* and one with *possum*; annotate every finite form.

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 7

M07: Reference, Comparison, and Number — practice sheets

Packet memory key: M07. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

7.1 M07-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

G074	Adverbs and numerals <i>word classes</i>	How should an adverb or numeral be entered and parsed rather than forced into a noun or adjective pattern?	_____

7.7 M07-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Combine the perfect passive participles *inventus* and *apertus* with the proper form of *sum*.

Morphology and syntax notes:

7.8 M07-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one true passive and one deponent clause, then identify why their similar endings do not imply the same voice meaning.

Proposition outline:

Draft and revision:

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 8

M08: Infinitives, Participles, and Absolutes — practice sheets

Packet memory key: M08. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

8.1 M08-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

10.6 M10-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G044	Temporal, causal, and concessive relations <i>subordinate clauses</i>	Why does a conjunction alone not settle the relation or mood?	_____
G045	Condition as a two-clause system <i>conditions</i>	Name the two members and the evidence needed for classification.	_____
G046	Independent subjunctives <i>subjunctive syntax</i>	Name four broad independent uses and the need for context.	_____
G075	Relative clause of characteristic <i>relative clauses</i>	What distinguishes a relative clause of characteristic from a merely identifying relative clause?	_____

10.7 M10-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Place the postpositive correctly: *puer / librum / habet / autem / puella / aquam / portat.*

Morphology and syntax notes:

10.8 M10-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-clause paragraph using *et*, *sed*, *enim*, and *igitur*; label the relation of each.

Proposition outline:

Draft and revision:

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 11

M11: Commands, Wishes, and Verbal Nouns — practice sheets

Packet memory key: M11. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

11.1 M11-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

13.7 M13-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Parse and expand *hostia / in / altari / est*.

Morphology and syntax notes:

13.8 M13-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two ordinary analytical clauses using four words from the prayer-and-offering family.

Proposition outline:

Draft and revision:

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 14

M14: Orations and Petitions — practice sheets

Packet memory key: M14. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

14.1 M14-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

16.7 M16-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Build two copular clauses from *veritas / magna / res / est / tempus / longum / est*.

Morphology and syntax notes:

16.8 M16-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three connected claims using *causa*, *ratio*, *memoria*, and *sapientia*; keep the syntax simple enough to verify.

17.7 M17-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Order and parse *puer / discit / intellegit / respondet*.

Morphology and syntax notes:

17.8 M17-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a short question-and-answer sequence using three knowing or teaching verbs.

CHAPTER 18

M18: Holy Week, Requiem, and the Complete Mass — practice sheets

Packet memory key: M18. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

18.1 M18-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

20.6 M20-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response

G079	Periodic syntax <i>prose style</i>	How should a long period be reduced without destroying its architecture?	_____

20.7 M20-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *ius / potestas / auctoritas / res / diversæ / sunt*; explain agreement.

Morphology and syntax notes:

20.8 M20-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three definitions that keep *ius*, *potestas*, and *auctoritas* distinct without claiming a complete legal theory.

Proposition outline:

Draft and revision:

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 21

M21: Collation and Controlled Imitation — practice sheets

Packet memory key: M21. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

21.1 M21-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

21.6 M21-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response

G055	Proposition-first composition <i>composition</i>	State a reliable order for drafting a paragraph.	_____

G080	Textual collation <i>source discipline</i>	What belongs in a minimal collation record?	_____

21.7 M21-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Build a sentence from *doctrina / voluntatem / format / oratio / sententiam / explicat*.

Morphology and syntax notes:

21.8 M21-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-sentence paragraph linking memory, desire, community, teaching, and discourse.

Proposition outline:

Draft and revision:

Before continuing. Return to this packet's words and facts until their recall is reasonably dependable in both isolated prompts and fresh connected Latin; retain uncertain entries in the next packet's personal return list.

CHAPTER 22

M22: Guided Composition and Independent Research — practice sheets

Packet memory key: M22. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

22.1 M22-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

22.7 M22-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *puer / sententias / componit / corrigit / defendit*; identify shared elements.

Morphology and syntax notes:

22.8 M22-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Draft a five-sentence analytical paragraph that demonstrates, distinguishes, explains, corrects, and defends one simple claim.

Part III

Advanced Poetry-Branch Practice Sheets

Poetry is prepared within the common trunk through close attention to syntax, word order, compression, rhetoric, textual evidence, and composition. The following branch adds explicit prosodic, metrical, poetic-syntactic, and verse- composition memory work; it does not displace continued Missal and prose reading.

CHAPTER 1

P1: Textual Prosody — practice sheets

Packet memory key: P1. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

1.1 P1-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

6.7 P6-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *imago / et / figura / sensum / carminis / audent*.

Morphology and syntax notes:

6.8 P6-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-sentence note that identifies an image, names a figure, proves its grammar, and states its effect.

1.5 M01-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L001	<i>vulpes, vulpis f.</i>	learn nominative and genitive together
L002	<i>fuscus, -a, -um</i>	agree with the described noun; the exact color sense depends on context
L003	<i>canis, canis m./f.</i>	gender follows the animal meant; genitive reveals the stem
L004	<i>avis, avis f.</i>	regularly pair forms with a governing verb or preposition

L204	<i>stella, -æ f.</i>	literal and symbolic senses must be established by the passage
L205	<i>nubes, nubis f.</i>	stem <i>nub-</i> ; use with weather, motion, and figurative description as context warrants
L206	<i>albus, -a, -um</i>	agree with its noun; color, brightness, and figurative force depend on context
L207	<i>niger, nigra, nigrum</i>	learn all three nominative forms; agree with the described noun
L208	<i>ruber, rubra, rubrum</i>	learn all three nominative forms; literal color and figurative force require context
L209	<i>ambulo, -are, -avi, -atum</i>	usually intransitive; route, place, accompaniment, or manner is supplied by an appropriate case or phrase

1.6 M01-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G001	Lemma and printed form <i>dictionary literacy</i>	State the difference between a lemma and a printed word form; give one example.	A lemma is the dictionary headword for a lexeme; a printed form is an inflected occurrence carrying grammatical features. In <i>vias</i> , the lemma is <i>via</i> ; the printed form is accusative plural.
G002	Phrase and clause <i>sentence structure</i>	Give the deciding difference between a phrase and a clause.	A phrase is organized around a head without its own predication. A clause contains a predicate with an expressed or understood subject; the predicate is normally finite but may be non-finite in a dependent construction.
G003	Subject, predicate, and object <i>sentence structure</i>	Define subject, predicate, and direct object without equating the subject with the actor.	The subject is what the clause predicates about and ordinarily controls finite-verb agreement. The predicate is the assertion centered on the verb. A direct object is an accusative complement selected by a transitive verb. A passive subject is not the actor.
G004	A noun's dictionary form <i>dictionary literacy</i>	Write the three pieces normally learned with a noun and say what each supplies.	Learn nominative singular, genitive singular, and gender. The nominative identifies the lemma, the genitive reveals the stem and declension, and gender controls agreement.
G005	Case, number, and gender <i>nominal morphology</i>	Explain why these three coordinates must be kept distinct.	Case marks a form's possible syntactic relations, number distinguishes singular and plural, and lexical gender controls agreement. None can be inferred safely from an English gloss alone.
G006	Agreement and government <i>nominal syntax</i>	State the difference and give one example of each.	Agreement copies relevant features: <i>via longa</i> . Government selects a complement form: <i>cum via</i> has ablative because <i>cum</i> governs it.

1.7 M01-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Arrange *vulpes / fusca / est* as a complete clause and label subject, copula, and predicate adjective.

Model and points to check. *Vulpes fusca est.* *Vulpes* is subject, *est* copula, and *fusca* feminine singular nominative predicate adjective.

1.8 M01-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two transparent clauses about an animal, using one size adjective and one color adjective.

Model and points to check. Model: *Avis parva est. Vulpes magna et fusca est.* Other accurate ordinary clauses are possible.

CHAPTER 2

M02: Noun Systems — models and checks

Packet memory key: M02. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

2.1 M02-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

2.5 M02-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L009	<i>puer, pueri m.</i>	stem <i>puer-</i> ; nominative retains no -us
L010	<i>puella, -æ f.</i>	use as subject, object, possessor, recipient, and address
L011	<i>vir, viri m.</i>	stem <i>vir-</i> ; distinguish from <i>vis</i>
L012	<i>femina, -æ f.</i>	use in ordinary narrative before specialized titles
L013	<i>agricola, -æ m.</i>	lexical gender is masculine despite first-declension endings
L014	<i>domus, -us f.</i>	learn common place forms with their constructions
L015	<i>porto, -are, -avi, -atum</i>	normally takes an accusative object
L016	<i>video, -ere, vidi, visum</i>	takes an accusative object; learn the irregular perfect stem
L210	<i>mater, matris f.</i>	stem <i>matr-</i> ; relational genitive or possessive context may specify whose mother
L211	<i>frater, fratris m.</i>	stem <i>fratr-</i> ; literal kinship and communal address depend on context
L212	<i>soror, sororis f.</i>	stem <i>soror-</i> ; literal and communal senses require context
L213	<i>amicus, -i m.</i>	a person related by friendship; distinguish from the adjective <i>amicus, -a, -um</i> by syntax
L214	<i>familia, -æ f.</i>	may denote a household or dependants as well as modern family relations; context controls
L215	<i>ianua, -æ f.</i>	use with verbs of opening, closing, entering, or standing near
L216	<i>fenestra, -æ f.</i>	use with place, light, opening, and looking constructions
L217	<i>paries, parietis m.</i>	stem <i>pariet-</i> ; distinguish a structural wall from a city wall when the passage does
L218	<i>tectum, -i n.</i>	literal roof may stand for the dwelling by context; apply the neuter rule
L219	<i>lectus, -i m.</i>	distinguish this noun from the participle <i>lectus</i> by agreement and syntax
L220	<i>sella, -æ f.</i>	use with verbs of sitting, placing, carrying, or authority only as context licenses
L221	<i>hortus, -i m.</i>	place constructions follow the governing preposition or case use
L222	<i>vicus, -i m.</i>	the scale of settlement or urban subdivision depends on historical context
L223	<i>flumen, fluminis n.</i>	stem <i>flumin-</i> ; apply the neuter rule and learn place constructions separately
L224	<i>mons, montis m.</i>	stem <i>mont-</i> ; motion and location take the construction selected by context
L225	<i>mare, maris n.</i>	learn ablative singular <i>mari</i> and neuter plural forms with the full paradigm
L226	<i>navis, navis f.</i>	context selects vessel size; use place and motion constructions according to syntax
L001	<i>vulpes, vulpis f.</i>	learn nominative and genitive together
L002	<i>fuscus, -a, -um</i>	agree with the described noun; the exact color sense depends on context
L003	<i>canis, canis m./f.</i>	gender follows the animal meant; genitive reveals the stem
L004	<i>avis, avis f.</i>	regularly pair forms with a governing verb or preposition
L193	<i>felis, felis f.</i>	genitive reveals the unchanged stem; natural gender follows the animal meant

ID	Citation form	Usage / government
L197	<i>lupus, -i m.</i>	literal animal and figurative use must be distinguished from context
L202	<i>sol, solis m.</i>	stem <i>sol-</i> ; literal and figurative senses require context
L209	<i>ambulo, -are, -avi, -atum</i>	usually intransitive; route, place, accompaniment, or manner is supplied by an appropriate case or phrase

2.6 M02-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G007	First-declension endings <i>noun paradigms</i>	Write the first-declension singular and plural endings in nominative, genitive, dative, accusative, ablative, vocative order.	Singular: <i>-a, -æ, -æ, -am, -a, -a</i> . Plural: <i>-æ, -arum, -is, -as, -is, -æ</i> .
G008	Second-declension masculine endings <i>noun paradigms</i>	Write the regular <i>-us</i> masculine singular and plural endings in case order, including the vocative.	Singular: <i>-us, -i, -o, -um, -o, -e</i> . Plural: <i>-i, -orum, -is, -os, -is, -i</i> . Nouns in <i>-ius</i> and <i>Deus</i> require their learned vocative patterns.
G009	The neuter rule <i>noun paradigms</i>	State the neuter rule in full.	In every declension, neuter nominative, accusative, and vocative are alike; in the plural those three cases end in <i>-a</i> , or the appropriate neuter plural equivalent in the paradigm.
G010	Recovering a third-declension stem <i>noun paradigms</i>	Give the stem procedure and apply it to <i>corpus, corporis</i> .	Remove the genitive singular ending <i>-is</i> : <i>corporis</i> gives stem <i>corpor-</i> . The nominative alone often conceals the stem.
G011	Third-declension neuters and i-stems <i>noun paradigms</i>	Name the safest evidence for recognizing these patterns.	Use the complete dictionary entry, genitive stem, gender, and actual paradigm. Neuter rules are secure; i-stem details depend on the word's attested pattern and cannot be guessed from one surface ending.
G012	Syncretic forms <i>morphological reasoning</i>	What should be done when one ending represents several cases or numbers?	List the formally possible analyses, then use agreement, government, clause function, and sense to eliminate impossibilities. Do not assign the first familiar label.

2.7 M02-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Build a clause from *agricola / aquam / portat*; then change the subject to *puella*.

Model and points to check. *Agricola aquam portat. Puella aquam portat.* The first-declension ending does not make *agricola* feminine.

2.8 M02-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two clauses in which different people see or carry different concrete things.

Model and points to check. Model: *Puer viam videt. Puella aquam portat.*

CHAPTER 3

M03: Nouns and Adjectives — models and checks

Packet memory key: M03. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

3.6 M03-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G009	The neuter rule <i>noun paradigms</i>	State the neuter rule in full.	In every declension, neuter nominative, accusative, and vocative are alike; in the plural those three cases end in <i>-a</i> , or the appropriate neuter plural equivalent in the paradigm.
G013	First/second-declension adjective agreement <i>adjectives</i>	What coordinates does an adjective copy, and what does it not have to copy?	It agrees with its head in gender, number, and case. It need not share the noun's declension or an identical-looking ending.
G014	Third-declension adjective entries <i>adjectives</i>	Explain the information in <i>fidelis</i> , <i>fidele</i> and <i>misericors</i> , <i>misericordis</i> .	<i>Fidelis</i> , <i>fidele</i> gives masculine/feminine and neuter nominatives of a two-termination adjective. <i>Misericors</i> , <i>misericordis</i> gives nominative and genitive of a one-termination adjective, with stem <i>misericord-</i> .
G015	Attributive and predicate adjectives <i>adjectives</i>	Distinguish the two uses with a short pair.	An attributive adjective modifies within a noun phrase: <i>via longa</i> . A predicate adjective is asserted of the subject: <i>via longa est</i> . Both agree with the noun.

3.7 M03-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct a giving clause from *agricola / panem / puero / dat* and label both objects.

Model and points to check. *Agricola panem puero dat.* *panem* is accusative thing given; *puero* is dative recipient.

3.8 M03-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one sentence joining two objects and one sentence containing a place phrase.

Model and points to check. Model: *Agricola panem et vinum dat. Liber in mensa est.*

4.6 M04-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G016	Four principal parts <i>verb morphology</i>	State what each ordinary active principal part contributes.	The first-person present identifies the lemma and present shape; the present infinitive identifies conjugation and present stem; the first-person perfect supplies the perfect stem; the supine or perfect-passive form supplies the participial stem.
G017	Conjugation from the infinitive <i>verb morphology</i>	Give the ordinary infinitive markers for first, second, third, third-io, and fourth conjugations.	First <i>-are</i> ; second long <i>-ere</i> ; third short <i>-ere</i> ; third-io also short <i>-ere</i> but with a first principal part in <i>-io</i> ; fourth <i>-ire</i> . A dictionary's quantity or full entry distinguishes second from third.
G018	Active personal endings <i>verb morphology</i>	Write the ordinary active personal endings.	<i>-o/-m, -s, -t, -mus, -tis, -nt</i> . Stem and tense markers combine with them, and irregular verbs must be learned separately.
G019	The active present system <i>verb morphology</i>	Name the three tenses built on the present stem and the coordinates required in a full parse.	Present, imperfect, and future. A full finite parse gives lemma, person, number, tense, voice, mood, subject, and clause function.
G020	Imperfect and future signals <i>verb morphology</i>	State the principal formation contrast between first/second and third/fourth conjugation futures.	First and second commonly use future <i>-bo, -bis, -bit</i> ; third and fourth use forms beginning <i>-am, -es, -et</i> . The imperfect uses <i>-ba-</i> with the appropriate stem and linking vowel.
G021	<i>sum</i> and <i>possum</i> <i>irregular verbs</i>	State the relation between these verbs and one construction each commonly serves.	<i>Sum</i> is an irregular copula or verb of existence; <i>possum</i> is its compound with forms adjusted before initial <i>s</i> . <i>Sum</i> links predicates, while <i>possum</i> commonly governs a complementary infinitive.

4.7 M04-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Make each adjective agree: *via / antiquus / longus; urbs / novus / magnus.*

Model and points to check. *Via antiqua longa est. Urbs nova magna est.*

4.8 M04-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two contrasting descriptions with *novus/antiquus* or *magnus/parvus*.

Model and points to check. Model: *Liber antiquus magnus est; liber novus parvus est.*

5.6 M05-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G022	The perfect active stem <i>verb morphology</i>	How is the perfect stem ordinarily recovered, and why must it be memorized?	Remove final <i>-i</i> from the third principal part. Sound change and suppletion make many perfect stems unpredictable from the present stem, so the principal part is a lexical fact.
G023	Perfect-system active tenses <i>verb morphology</i>	Name the three tenses built on the perfect stem and their basic time relations.	Perfect presents prior or completed action according to context; pluperfect is prior to a past reference point; future perfect is prior to a future reference point.
G024	Tense and contextual time <i>verb interpretation</i>	Why is a Latin tense name not automatically an English tense?	Tense is a grammatical form combining temporal and aspectual information. Context fixes reference time and discourse force, so one Latin perfect may require different natural English renderings.
G025	Present-system passive endings <i>voice</i>	Write the ordinary passive personal endings.	<i>-r, -ris/-re, -tur, -mur, -mini, -ntur.</i> Parse person, number, tense, mood, and voice before translating.
G026	Perfect-system passive <i>voice</i>	State the two components and their jobs.	A perfect passive participle agrees with the subject in gender and number; a finite form of <i>sum</i> carries person, number, mood, and the tense contribution. Both are required.
G027	Deponents and <i>fio</i> <i>voice</i>	Explain why passive-looking morphology does not settle meaning.	A deponent lexeme uses passive-system forms with active or middle lexical sense, so dictionary identity controls. <i>Fio</i> has its own paradigm and commonly supplies the present passive sense of <i>facio</i> ; it is not a regular form guessed from <i>facio</i> .

5.7 M05-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct two actions from *agricola / aquam / portat / puella / librum / legit*.

Model and points to check. *Agricola aquam portat; puella librum legit.*

5.8 M05-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a three-clause sequence using three different present-tense verbs.

Model and points to check. Model: *Puella librum legit, verba scribit, aquam portat.* The project word *verba* is supplied for the exercise.

CHAPTER 6

M06: Pronouns, Prepositions, and Reading — models and checks

Packet memory key: M06. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

6.1 M06-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

6.5 M06-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L041	<i>sum, esse, fui, futurus</i>	links subject and predicate or expresses existence and location
L042	<i>possum, posse, potui</i>	normally governs a complementary infinitive
L043	<i>habeo, -ere, habui, habitum</i>	takes an object; idiomatic constructions require context
L044	<i>facio, -ere, feci, factum</i>	takes an object or predicate complement; present passive uses <i>fi</i>
L045	<i>dico, -ere, dixi, dictum</i>	may govern direct speech, object, or indirect statement
L046	<i>accipio, -ere, accepi, acceptum</i>	normally takes an accusative object
L047	<i>mitto, -ere, misi, missum</i>	takes an object; destination or recipient follows context
L048	<i>duco, -ere, duxi, ductum</i>	takes an object; compounds often preserve motion
L278	<i>ipse, ipsa, ipsum</i>	agrees with its referent; its discourse emphasis must be read in context
L279	<i>idem, eadem, idem</i>	agrees with its referent; learn the compounded forms rather than guessing them
L280	<i>aliquis, aliquid</i>	declines from <i>quis</i> ; after certain particles the shorter indefinite may occur
L281	<i>quisquam, quidquam or quicquam</i>	especially common where existence is denied, questioned, or limited; syntax fixes case
L282	<i>nemo, neminis m./f.</i>	case forms are partly supplied from <i>nullus</i> ; record the actual form rather than extrapolating mechanically
L283	<i>nihil, indeclinable n.</i>	commonly nominative or accusative; oblique relations use other expressions
L284	<i>uter, utra, utrum</i>	declines with pronominal genitive <i>-ius</i> and dative <i>-i</i>
L285	<i>alter, altera, alterum</i>	genitive singular <i>alterius</i> , dative <i>alteri</i> ; agree with the noun or referent
L286	<i>alius, alia, aliud</i>	genitive singular <i>alius</i> , dative <i>alii</i> ; contrast with <i>alter</i>
L287	<i>totus, -a, -um</i>	genitive singular <i>totius</i> , dative <i>toti</i> ; agrees with its noun
L288	<i>nullus, -a, -um</i>	genitive singular <i>nullius</i> , dative <i>nulli</i> ; agree with its noun or stand substantively
L289	<i>super + accusative or ablative</i>	memorize the attested case and construction; case and register narrow the relation
L290	<i>sub + accusative or ablative</i>	accusative commonly marks motion toward; ablative commonly marks position, with idioms checked separately
L291	<i>apud + accusative</i>	person, place, community, or cited author controls the contextual rendering
L292	<i>contra + accusative</i>	literal opposition, legal or rhetorical opposition, and exchange idioms require context
L293	<i>inter + accusative</i>	number of participants, spatial relation, or temporal interval depends on context
L294	<i>pro + ablative</i>	choose the contextual relation from governor and discourse rather than one English equivalent
L033	<i>amo, -are, -avi, -atum</i>	normally takes an accusative object
L034	<i>laudo, -are, -avi, -atum</i>	normally takes an accusative object
L035	<i>voco, -are, -avi, -atum</i>	takes an object; naming constructions require context
L036	<i>custodio, -ire, -ivi, -itum</i>	normally takes an accusative object
L261	<i>laboro, -are, -avi, -atum</i>	normally intransitive; a task or purpose may be expressed by the construction

ID	Citation form	Usage / government
L268	<i>ago, agere, egi, actum</i>	highly context-dependent; object, idiom, and compounds determine the sense
L274	<i>morior, mori, mortuus sum</i>	passive-form morphology with active lexical sense; normally intransitive
L277	<i>proficiscor, proficisci, profectus sum</i>	normally intransitive; destination, source, and purpose follow their constructions

6.6 M06-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G028	Personal and reflexive reference <i>pronouns</i>	State the distinction between a third-person reflexive and a non-reflexive pronoun.	The reflexive refers back to the subject of its governing domain; a non-reflexive third-person form points elsewhere or resumes an antecedent. Case still follows the pronoun's own function.
G029	Demonstratives <i>pronouns</i>	What must be recorded when parsing a demonstrative?	Give lemma, gender, number, case, syntactic function, and contextual referent or discourse force. Near/far English glosses are only starting points.
G030	The relative-pronoun two-axis rule <i>pronouns</i>	State how a relative pronoun receives gender, number, and case.	Gender and number normally come from the antecedent; case comes from the relative pronoun's function inside its own clause.
G031	Preposition government <i>case syntax</i>	What must be memorized with every preposition?	Memorize the case or cases governed and the contrast between them. Then choose the contextual relation; one English preposition does not define every use.
G032	<i>ad</i> and <i>in</i> <i>case syntax</i>	Contrast their core place constructions.	<i>Ad</i> governs accusative and commonly marks approach or relation. <i>In</i> with accusative commonly marks entry or destination; <i>in</i> with ablative commonly marks location.
G033	Postpositive particles <i>discourse syntax</i>	Define postpositive and name three common examples.	A postpositive normally stands after the first word or constituent of its clause while organizing the discourse. Common examples are <i>autem</i> , <i>enim</i> , and often <i>igitur</i> ; <i>quoque</i> normally follows its focus.
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G052	Ellipsis and reconstruction <i>word order</i>	State the boundary on supplying omitted words.	Supply a word only when grammar or a strong parallel requires or licenses it; place the supply in brackets. Reconstruction preserves every printed form and is an analytical scaffold, not a rewritten source.
G077	Direct reading and lookup discipline <i>reading method</i>	State a responsible order for reading before and after consulting aids.	Mark finite verbs, clause boundaries, agreement, and government from the printed text; propose a provisional structure; then consult a complete lexical or grammatical entry and revise visibly. A gloss or translation may test an analysis but must not replace it.

6.7 M06-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Join ability to possession: *puer / librum / habet / legere / potest.*

Model and points to check. *Puer librum habet et legere potest. legere complements potest.*

6.8 M06-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one clause with *sum* and one with *possum*; annotate every finite form.

Model and points to check. Model: *Liber bonus est. Puella eum legere potest.* *est* and *potest* are third singular present active indicative.

CHAPTER 7

M07: Reference, Comparison, and Number — models and checks

Packet memory key: M07. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

7.1 M07-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

7.5 M07-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L049	<i>creo, -are, -avi, -atum</i>	normally takes an accusative object; sense follows register
L050	<i>aperio, -ire, aperui, apertum</i>	normally takes an accusative object
L051	<i>invenio, -ire, inveni, inventum</i>	normally takes an accusative object
L052	<i>peto, -ere, petivi, petitum</i>	object and context distinguish request from movement or attack
L053	<i>sequor, sequi, secutus sum</i>	takes an accusative object despite passive-looking forms
L054	<i>loquor, loqui, locutus sum</i>	topic or addressee construction follows context
L055	<i>confiteor, confiteri, confessus sum</i>	object or addressee depends on the contextual sense
L056	<i>misereor, misereri, misertus sum</i>	learn the complement actually used in the source; liturgical nobis is dative
L295	<i>unus, -a, -um</i>	genitive singular <i>unius</i> , dative <i>uni</i> ; agrees with its noun and may stand substantively
L296	<i>duo, duæ, duo</i>	declines in the plural with distinct gender forms; learn the complete paradigm
L297	<i>tres, tria</i>	masculine and feminine <i>tres</i> , neuter <i>tria</i> ; genitive <i>trium</i>
L298	<i>quattuor</i>	number and syntactic function are shown by the counted noun and clause
L299	<i>quinque</i>	number and syntactic function are shown by the counted noun and clause
L300	<i>primus, -a, -um</i>	agrees with its noun; order, rank, and first part of a whole depend on context
L301	<i>secundus, -a, -um</i>	agree with its noun; ordinal and non-ordinal senses require context
L302	<i>tertius, -a, -um</i>	agrees with its noun and may stand substantively
L303	<i>maior, maius</i>	genitive <i>maioris</i> ; comparison may use <i>quam</i> or an ablative according to construction
L304	<i>minor, minus</i>	genitive <i>minoris</i> ; agree with the compared noun and prove the comparison construction
L305	<i>melior, melius</i>	genitive <i>melioris</i> ; masculine and feminine <i>melior</i> , neuter <i>melius</i>
L306	<i>peior, peius</i>	genitive <i>peioris</i> ; agree with the noun or read substantively as syntax requires
L307	<i>plus, pluris n.</i>	case, agreement, and construction distinguish substantive quantity from adverbial degree
L308	<i>plurimus, -a, -um</i>	agrees with its noun; singular mass and plural count uses differ
L309	<i>paucus, -a, -um</i>	number and head noun determine few people or things versus little amount
L310	<i>satis</i>	may take a partitive genitive; distinguish quantity from adverbial degree
L311	<i>sæpe</i>	modifies a verb, adjective, adverb, or wider proposition according to placement
L041	<i>sum, esse, fui, futurus</i>	links subject and predicate or expresses existence and location
L042	<i>possum, posse, potui</i>	normally governs a complementary infinitive
L043	<i>habeo, -ere, habui, habitum</i>	takes an object; idiomatic constructions require context
L044	<i>facio, -ere, feci, factum</i>	takes an object or predicate complement; present passive uses <i>fio</i>
L278	<i>ipse, ipsa, ipsum</i>	agrees with its referent; its discourse emphasis must be read in context

ID	Citation form	Usage / government
L283	<i>nihil, indeclinable n.</i>	commonly nominative or accusative; oblique relations use other expressions
L289	<i>super + accusative or ablative</i>	memorize the attested case and construction; case and register narrow the relation
L294	<i>pro + ablative</i>	choose the contextual relation from governor and discourse rather than one English equivalent

7.6 M07-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G029	Demonstratives <i>pronouns</i>	What must be recorded when parsing a demonstrative?	Give lemma, gender, number, case, syntactic function, and contextual referent or discourse force. Near/far English glosses are only starting points.
G030	The relative-pronoun two-axis rule <i>pronouns</i>	State how a relative pronoun receives gender, number, and case.	Gender and number normally come from the antecedent; case comes from the relative pronoun's function inside its own clause.
G073	Comparison of adjectives <i>adjectives</i>	State the ordinary comparison series and the case commonly used after a comparative without <i>quam</i> .	Positive names the quality, comparative marks a greater degree, and superlative marks the highest or a very high degree. A comparative may take an ablative of comparison when <i>quam</i> is absent; the syntax and context must still be proved.
G074	Adverbs and numerals <i>word classes</i>	How should an adverb or numeral be entered and parsed rather than forced into a noun or adjective pattern?	Record an adverb as an indeclinable modifier and identify the word or clause it modifies. Record a numeral's lexical class and actual inflection: some are indeclinable, some decline as adjectives, and distributive or adverbial forms have their own functions.

7.7 M07-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Combine the perfect passive participles *inventus* and *apertus* with the proper form of *sum*.

Model and points to check. *Liber inventus et apertus est.* Both participles are masculine singular nominative and agree with *liber*.

7.8 M07-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one true passive and one deponent clause, then identify why their similar endings do not imply the same voice meaning.

Model and points to check. Model: *Liber aperitur. Puer viam sequitur.* *aperitur* is true passive; *sequitur* is deponent with active sense.

CHAPTER 8

M08: Infinitives, Participles, and Absolutes — models and checks

Packet memory key: M08. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

8.5 M08-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L057	<i>ego, mei</i>	case follows function; nominative is often omitted
L058	<i>tu, tui</i>	case follows function; nominative is often omitted
L059	<i>nos, nostri or nostrum</i>	genitive forms differ by construction; other cases follow the paradigm
L060	<i>vos, vestri or vestrum</i>	genitive forms differ by construction; other cases follow the paradigm
L061	<i>is, ea, id</i>	gender and number follow reference; case follows clause function
L062	<i>hic, hæc, hoc</i>	near or discourse-present reference; case follows function
L063	<i>ille, illa, illud</i>	remote or emphatic reference; context decides force
L064	<i>qui, quæ, quod</i>	gender and number from antecedent; case from its own clause
L312	<i>scio, scire, scivi, scitum</i>	may take an object, interrogative clause, or indirect statement according to context
L313	<i>puto, -are, -avi, -atum</i>	may take an object or accusative-and-infinitive indirect statement
L314	<i>credo, -ere, credidi, creditum</i>	person trusted is commonly dative; a proposition may be expressed by object or clause
L315	<i>spero, -are, -avi, -atum</i>	may take an object, infinitive, or content clause; distinguish theological and ordinary use by context
L316	<i>iubeo, -ere, iussi, iussum</i>	commonly governs an accusative person plus infinitive; passive construction changes the personal subject
L317	<i>prohibeo, -ere, prohibui, prohibitum</i>	takes an object and may govern an infinitive or clause according to construction
L318	<i>cogo, -ere, coegi, coactum</i>	normally takes an accusative person plus infinitive in the sense compel
L319	<i>cupio, -ere, cupivi, cupitum</i>	may take an object or complementary infinitive; context fixes the desired thing
L320	<i>incipio, -ere, incepti, inceptum</i>	may be intransitive or govern an object or complementary infinitive
L321	<i>desino, -ere, desii or desivi, desitum</i>	commonly governs a complementary infinitive or is used intransitively
L322	<i>conor, conari, conatus sum</i>	normally governs a complementary infinitive; passive-form morphology has active sense
L323	<i>patior, pati, passus sum</i>	takes an object; an infinitive may express what one allows to happen
L324	<i>nascor, nasci, natus sum</i>	normally intransitive; source, parentage, time, or place follows its construction
L325	<i>orior, oriri, ortus sum</i>	normally intransitive; source or beginning is expressed by context and construction
L326	<i>utor, uti, usus sum</i>	governs the ablative of the thing used
L327	<i>fruor, frui, fructus sum</i>	normally governs the ablative of the thing enjoyed
L328	<i>vescor, vesci</i>	commonly governs the ablative of the food
L049	<i>creo, -are, -avi, -atum</i>	normally takes an accusative object; sense follows register
L050	<i>aperio, -ire, aperui, apertum</i>	normally takes an accusative object
L051	<i>invenio, -ire, inveni, inventum</i>	normally takes an accusative object
L052	<i>peto, -ere, petivi, petitum</i>	object and context distinguish request from movement or attack
L295	<i>unus, -a, -um</i>	genitive singular <i>unius</i> , dative <i>uni</i> ; agrees with its noun and may stand substantively
L300	<i>primus, -a, -um</i>	agrees with its noun; order, rank, and first part of a whole depend on context

ID	Citation form	Usage / government
L303	<i>maior, maius</i>	genitive <i>maioris</i> ; comparison may use <i>quam</i> or an ablative according to construction
L311	<i>sæpe</i>	modifies a verb, adjective, adverb, or wider proposition according to placement

8.6 M08-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G034	Infinitive time and voice <i>non-finite verbs</i>	Name the six ordinary infinitives and how their time is read.	Present, perfect, and future, each active and passive. Their time is relative to the governing verb: simultaneous, prior, or subsequent, not automatically present, past, or future from the reader's moment.
G035	Indirect statement <i>non-finite syntax</i>	Identify its core architecture.	A verb of saying, thinking, perceiving, or related activity may govern an accusative subject plus infinitive. The infinitive's tense expresses relative time, and predicate complements agree as their construction requires.
G036	Complementary infinitive <i>non-finite syntax</i>	Distinguish it from indirect statement.	A complementary infinitive completes a verb such as <i>possum</i> without normally introducing a separate accusative subject. Indirect statement makes a reported predication with its own accusative subject.
G037	The four participles <i>non-finite verbs</i>	Name their ordinary time and voice relations.	Present active: simultaneous active action. Perfect passive: prior passive action. Future active: subsequent or intended active action. Gerundive: future/passive verbal adjective whose force depends on construction.
G038	Ablative absolute <i>non-finite syntax</i>	Give its core form and a responsible translation method.	It normally contains an ablative noun or pronoun plus an agreeing ablative participle, grammatically detached from the main clause. First state relative time and voice; then choose a contextual relation such as time, cause, concession, or circumstance without pretending the morphology alone names it.

8.7 M08-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct reference from *hæc / puella / librum / legit / ille / puer / eam / videt*.

Model and points to check. *Hæc puella librum legit; ille puer eam videt.* *eam* refers to the girl and is object.

8.8 M08-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two linked clauses using a demonstrative and a relative pronoun; identify antecedent and in-clause case.

Model and points to check. Model: *Hic est liber quem puella legit.* *Quem* is masculine singular from *liber* and accusative as object of *legit*.

CHAPTER 9

M09: Subjunctive System, Purpose, and Result — models and checks

Packet memory key: M09. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

9.1 M09-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

9.5 M09-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L065	<i>ad + accusative</i>	motion, direction, relation, or purpose follows context
L066	<i>a or ab + ablative</i>	source or personal agent; form chosen partly by following sound
L067	<i>cum + ablative</i>	accompaniment or associated circumstance; distinguish conjunction cum
L068	<i>de + ablative</i>	source, topic, or relation follows context
L069	<i>e or ex + ablative</i>	source or emergence; form chosen partly by following sound
L070	<i>in + accusative or ablative</i>	accusative commonly marks destination; ablative commonly marks location
L071	<i>per + accusative</i>	route, duration, means, or mediation follows context
L072	<i>sine + ablative</i>	learn the governed case with the headword
L329	<i>impero, -are, -avi, -atum</i>	person commanded is commonly dative; content may use <i>ut</i> or <i>ne</i> with subjunctive
L330	<i>moneo, -ere, monui, monitum</i>	takes an object and may govern content by infinitive, clause, or other complement
L331	<i>persuadeo, -ere, persuasi, persuasum</i>	person persuaded is dative; content is supplied by an appropriate clause or complement
L332	<i>hortor, hortari, hortatus sum</i>	takes an accusative person and commonly an <i>ut</i> or <i>ne</i> content clause
L333	<i>precor, precari, precatus sum</i>	may take an object, person addressed, or content clause as the construction requires
L334	<i>timeo, -ere, timui</i>	takes an object or fear clause; interpret <i>ne</i> and <i>ut</i> from the construction
L335	<i>vereor, vereri, veritus sum</i>	takes an object or fear clause; respectful and fearful senses depend on context
L336	<i>efficio, -ere, effeci, effectum</i>	takes an object and may govern a result clause or predicate complement
L337	<i>curo, -are, -avi, -atum</i>	takes an object; may govern a purpose or substantive clause in the sense arrange
L338	<i>sino, -ere, sivi, situm</i>	normally takes an accusative person or thing plus infinitive
L339	<i>veto, -are, vetui, vetitum</i>	commonly governs an accusative person plus infinitive; passive usage must be parsed carefully
L340	<i>caveo, -ere, cavi, cautum</i>	may be intransitive, take an object, govern <i>ne</i> , or take dative according to sense
L341	<i>evenio, -ire, eveni, eventum</i>	often intransitive; a dative may mark the person affected
L342	<i>accido, -ere, accidi</i>	often impersonal with a substantive clause; dative may mark the person affected
L343	<i>oportet, oportere, oportuit</i>	commonly governs an accusative person plus infinitive or a substantive clause
L344	<i>necesse</i>	<i>necesse est</i> may govern a dative of the person concerned and an infinitive or clause
L345	<i>tantus, -a, -um</i>	agrees with its noun; may anticipate a result clause and correlates with <i>quantus</i>
L057	<i>ego, mei</i>	case follows function; nominative is often omitted
L058	<i>tu, tui</i>	case follows function; nominative is often omitted
L059	<i>nos, nostri or nostrum</i>	genitive forms differ by construction; other cases follow the paradigm
L060	<i>vos, vestri or vestrum</i>	genitive forms differ by construction; other cases follow the paradigm

ID	Citation form	Usage / government
L312	<i>scio, scire, scivi, scitum</i>	may take an object, interrogative clause, or indirect statement according to context
L316	<i>iubeo, -ere, iussi, iussum</i>	commonly governs an accusative person plus infinitive; passive construction changes the personal subject
L323	<i>patior, pati, passus sum</i>	takes an object; an infinitive may express what one allows to happen
L326	<i>utor, uti, usus sum</i>	governs the ablative of the thing used

9.6 M09-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G039	Four subjunctive tenses <i>subjunctive morphology</i>	Name the tenses and their ordinary formation bases.	Present uses the present stem with its subjunctive vowel; imperfect uses the present infinitive plus endings; perfect uses the perfect stem plus <i>-eri-</i> ; pluperfect uses the perfect infinitive plus endings. Irregular verbs retain learned forms.
G040	Sequence of tenses <i>subjunctive syntax</i>	State the primary/historic starting distinction without turning it into a mechanical translation.	A primary governing time ordinarily pairs with present or perfect subjunctive for simultaneous/subsequent or prior relation; a historic governing time ordinarily pairs with imperfect or pluperfect. Construction and context still control interpretation.
G041	Purpose and result <i>subordinate clauses</i>	Give the principal diagnostic contrast.	Both may use <i>ut</i> plus subjunctive. Purpose states an intended end and is negated by <i>ne</i> ; result states a consequence, is commonly negated by <i>ut non</i> , and often has degree or anticipatory signals. The governor and discourse decide.
G042	Indirect command <i>subordinate clauses</i>	Identify its architecture and negation.	A verb of asking, ordering, urging, or causing governs a content command, commonly <i>ut</i> or <i>ne</i> plus subjunctive. Classify the governing verb before assigning the clause.
G043	Substantive clauses <i>subordinate clauses</i>	What makes a clause substantive?	The whole clause fills a noun-like slot required or licensed by a governing expression: subject, object, complement, or content. Its internal verb remains fully parsed.

9.7 M09-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Choose cases and reconstruct: *puer / ad / urbem / venit / in / urbe / cum / puella / manet.*

Model and points to check. *Puer ad urbem venit; in urbe cum puella manet.* *ad* governs accusative, while locative *in* and *cum* govern ablative here.

9.8 M09-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write four short place phrases showing destination, location, source, and route.

Model and points to check. Model: *ad urbem; in urbe; ex urbe; per urbem.*

CHAPTER 10

M10: Circumstance, Conditions, and Characteristic — models and checks

Packet memory key: M10. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

10.1 M10-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

10.5 M10-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L073	<i>et</i>	relation may be additive, sequential, or contextually stronger
L074	<i>sed</i>	marks contrast or correction
L075	<i>autem</i>	normally follows the first constituent; force may be mild
L076	<i>enim</i>	normally follows the first constituent
L077	<i>igitur</i>	marks inference, transition, or resumption
L078	<i>quia</i>	may introduce cause or content; governing context decides
L079	<i>ut</i>	mood, correlatives, and governor decide the construction
L080	<i>ne</i>	distinguish from interrogative enclitic -ne
L346	<i>cum</i>	distinguish conjunction from preposition; mood, tense, and context classify the clause
L347	<i>ubi</i>	place, time, question, or relative connection depends on clause structure
L348	<i>postquam</i>	introduces a temporal clause; tense and discourse relation require contextual analysis
L349	<i>antequam</i>	mood and tense depend on factuality, anticipation, and context, not the conjunction alone
L350	<i>priusquam</i>	often split as <i>prius ... quam</i> ; mood and tense follow construction and viewpoint
L351	<i>donec</i>	temporal limit, duration, anticipation, mood, and tense must be read from context
L352	<i>simul</i>	may modify a clause or join a temporal relation, sometimes with <i>ac/atque</i>
L353	<i>forte</i>	modifies event manner or speaker commitment according to context
L354	<i>forsitan</i>	commonly qualifies the whole proposition; mood tendencies do not replace parsing
L355	<i>tamen</i>	commonly resumes or marks a concession; identify the contrasted propositions
L356	<i>quamquam</i>	introduces concession; mood and register must be checked in the actual passage
L357	<i>etsi</i>	conditional and concessive force overlap; classify from both clauses and speaker stance
L358	<i>dummodo</i>	introduces a limiting proviso and commonly takes subjunctive; negation is often <i>ne</i>
L359	<i>modo</i>	temporal, modal, and limiting senses depend on placement and construction
L360	<i>condicio, condicionis f.</i>	logical condition, negotiated terms, and social status are distinct contextual senses
L361	<i>eventus, -us m.</i>	result, occurrence, and success or failure depend on context
L362	<i>occasio, occasionis f.</i>	time, circumstance, and favorable opportunity must be distinguished contextually
L065	<i>ad + accusative</i>	motion, direction, relation, or purpose follows context
L066	<i>a or ab + ablative</i>	source or personal agent; form chosen partly by following sound
L067	<i>cum + ablative</i>	accompaniment or associated circumstance; distinguish conjunction <i>cum</i>

ID	Citation form	Usage / government
L068	<i>de + ablative</i>	source, topic, or relation follows context
L329	<i>impero, -are, -avi, -atum</i>	person commanded is commonly dative; content may use <i>ut</i> or <i>ne</i> with subjunctive
L332	<i>hortor, hortari, hortatus sum</i>	takes an accusative person and commonly an <i>ut</i> or <i>ne</i> content clause
L336	<i>efficio, -ere, effeci, effectum</i>	takes an object and may govern a result clause or predicate complement
L343	<i>oportet, oportere, oportuit</i>	commonly governs an accusative person plus infinitive or a substantive clause

10.6 M10-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G044	Temporal, causal, and concessive relations <i>subordinate clauses</i>	Why does a conjunction alone not settle the relation or mood?	Forms such as <i>cum</i> , <i>dum</i> , <i>quia</i> , and <i>quamvis</i> take different constructions. Governor, mood, tense, discourse viewpoint, and wider sentence determine whether time, cause, concession, or another relation is present.
G045	Condition as a two-clause system <i>conditions</i>	Name the two members and the evidence needed for classification.	The protasis states the condition and the apodosis its consequence. Classify the pair from both verbs' moods and tenses, time reference, and speaker stance; do not label from <i>si</i> alone.
G046	Independent subjunctives <i>subjunctive syntax</i>	Name four broad independent uses and the need for context.	Jussive or hortatory, potential, deliberative, and optative or wish uses are common broad families. Person, tense, negation, particles, and discourse force distinguish them.
G075	Relative clause of characteristic <i>relative clauses</i>	What distinguishes a relative clause of characteristic from a merely identifying relative clause?	It attributes a defining or characteristic kind of action to an indefinite or qualified antecedent and ordinarily uses the subjunctive. Antecedent, clause mood, governing context, and discourse force must support the classification.

10.7 M10-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Place the postpositive correctly: *puer / librum / habet / autem / puella / aquam / portat.*

Model and points to check. *Puer librum habet; puella autem aquam portat.* *Autem* follows the first constituent of its clause.

10.8 M10-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-clause paragraph using *et*, *sed*, *enim*, and *igitur*; label the relation of each.

Model and points to check. Model: *Puer librum habet et legit; puella autem aquam portat. Liber bonus est; puer enim eum laudat. Igitur puella quoque librum legit.*

L369	<i>licet, licere, licuit</i>	commonly takes dative of the person permitted plus infinitive, or a substantive clause
L370	<i>memini, meminisse</i>	takes genitive or accusative according to construction and sense; no ordinary present system
L371	<i>obliviscor, oblivisci, oblitus sum</i>	commonly takes genitive or accusative according to the object and construction
L372	<i>taceo, -ere, tacui, tacitum</i>	may be intransitive or take an object in the sense conceal or omit
L373	<i>attendo, -ere, attendi, attentum</i>	may take an object, dative, or prepositional complement according to sense and register
L374	<i>iussum, -i n.</i>	often used with possessive or dependent genitive; distinguish from a participial form by syntax
L375	<i>mandatum, -i n.</i>	biblical command, entrusted charge, and juridical mandate require contextual distinction
L376	<i>consilium, -i n.</i>	context distinguishes a plan, advice, decision, or deliberative body
L377	<i>metus, -us m.</i>	the feared thing may be expressed by genitive or other construction; context controls
L378	<i>necessitas, necessitatis f.</i>	logical, practical, and compelled necessity require contextual distinction
L379	<i>opto, -are, -avi, -atum</i>	normally takes an object and may govern an infinitive or wish construction
L073	<i>et</i>	relation may be additive, sequential, or contextually stronger
L074	<i>sed</i>	marks contrast or correction
L075	<i>autem</i>	normally follows the first constituent; force may be mild
L076	<i>enim</i>	normally follows the first constituent

ID	Citation form	Usage / government
L346	<i>cum</i>	distinguish conjunction from preposition; mood, tense, and context classify the clause
L351	<i>donec</i>	temporal limit, duration, anticipation, mood, and tense must be read from context
L355	<i>tamen</i>	commonly resumes or marks a concession; identify the contrasted propositions
L360	<i>condicio, condicionis f.</i>	logical condition, negotiated terms, and social status are distinct contextual senses

11.6 M11-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G046	Independent subjunctives <i>subjunctive syntax</i>	Name four broad independent uses and the need for context.	Jussive or hortatory, potential, deliberative, and optative or wish uses are common broad families. Person, tense, negation, particles, and discourse force distinguish them.
G047	Gerund and gerundive <i>verbal nouns and adjectives</i>	State the formal difference.	A gerund is a neuter singular verbal noun used in oblique cases and does not agree with an object. A gerundive is a passive verbal adjective that agrees with a noun; constructions may prefer the agreeing gerundive where an object would otherwise accompany a gerund.
G048	Passive periphrastic and supine <i>verbal nouns and adjectives</i>	State one diagnostic for each.	Gerundive plus <i>sum</i> can express obligation; the grammatical subject is nominative and the agent is often dative. A supine is a restricted fourth-declension verbal noun, chiefly accusative in <i>-um</i> after motion for purpose or ablative in <i>-u</i> with certain adjectives.
G076	Commands, prohibitions, wishes, and fears <i>subjunctive syntax</i>	Name the evidence that separates these related constructions.	Identify the governing expression if any, person, tense, mood, particles, and negation. Direct commands use imperative or jussive forms; wishes often use <i>utinam</i> or contextual optative force; fear clauses depend on a verb of fearing and require special care with <i>ne</i> and <i>ut</i> .

11.7 M11-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Make a coordinated clause from *pater / filium / videt / spiritus / cor / custodit*.

Model and points to check. *Pater filium videt, et spiritus cor custodit.*

11.8 M11-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three clauses that distinguish person, body, soul, and heart without treating the English gloss as a parse.

Model and points to check. Model: *Pater corpus videt. Anima vitam habet. Cor spiritum non videt.* These are project-created grammar sentences, not doctrinal propositions.

12.6 M12-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G049	Place and time <i>adverbial cases</i>	Give a decision order for a place or time phrase.	Identify morphology, preposition if any, lexical class of the noun, governing verb, and contextual relation. Then distinguish location, motion toward, motion from, time when, duration, or another use.
G050	Agent, means, manner, and cause <i>adverbial cases</i>	Give the principal contrast between personal agent and means.	A personal agent with a passive commonly uses <i>a/ab</i> plus ablative; an instrument or means commonly uses an unprepositioned ablative thing. Manner and cause require their own lexical and contextual evidence.
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G052	Ellipsis and reconstruction <i>word order</i>	State the boundary on supplying omitted words.	Supply a word only when grammar or a strong parallel requires or licenses it; place the supply in brackets. Reconstruction preserves every printed form and is an analytical scaffold, not a rewritten source.

12.7 M12-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Make the predicate agree in *fides / spes / caritas / bonus / sunt*.

Model and points to check. *Fides, spes et caritas bonæ sunt*. The coordinated feminine singular nouns take a feminine plural predicate adjective.

12.8 M12-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a balanced sentence pairing life with hope and death with fear; use only grammar already studied.

Model and points to check. Model: *In vita spes est; in morte fides manet.* *Manet* is supplied project vocabulary for this exercise.

13.5 M13-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L097	<i>altare, altaris n.</i>	often occurs with ad or in; case follows relation
L098	<i>ecclesia, -æ f.</i>	capitalization does not determine grammatical role
L099	<i>sacrificium, -i n.</i>	context and complements narrow the sense
L100	<i>hostia, -æ f.</i>	distinguish from hostis, enemy
L101	<i>munus, muneris n.</i>	a deliberately broad lexeme; context decides
L102	<i>donum, -i n.</i>	compare munus without treating them as automatic synonyms
L103	<i>oblatio, oblationis f.</i>	word family with offero and oblatum
L104	<i>prex, precis f.</i>	frequently plural preces; learn the actual number in context
L397	<i>missa, -æ f.</i>	liturgical celebration and the older ordinary sense of dismissal require contextual distinction
L398	<i>sacerdos, sacerdotis m./f.</i>	gender follows the person; context distinguishes cultic office and broader priestly language
L399	<i>minister, ministri m.</i>	liturgical role, public office, and ordinary service depend on context
L400	<i>plebs, plebis f.</i>	civic rank, collective people, and worshipping congregation are contextual senses
L401	<i>sanctuarium, -i n.</i>	building area, sacred place, and figurative refuge must be distinguished by context
L402	<i>evangelium, -i n.</i>	message, written Gospel, and liturgical Gospel reading require contextual distinction
L403	<i>epistola, -æ f.</i>	ordinary correspondence, biblical book, and liturgical reading depend on context
L404	<i>lectio, lectionis f.</i>	act of reading, selected text, and liturgical lesson are distinct contextual senses
L405	<i>psalmus, -i m.</i>	identify book, liturgical unit, quotation, or generic song from the source context
L406	<i>canticum, -i n.</i>	biblical canticle, liturgical chant, and ordinary song require contextual distinction
L407	<i>introitus, -us m.</i>	ordinary entry, textual beginning, and liturgical chant are contextual senses
L408	<i>graduale, gradualis n.</i>	liturgical chant and book title depend on context; do not infer performance details from the label
L409	<i>offertorium, -i n.</i>	chant, liturgical segment, and broader offering-related sense require context
L410	<i>communio, communionis f.</i>	sacramental, ecclesial, social, and chant senses must be kept distinct
L411	<i>calix, calicis m.</i>	ordinary vessel, scriptural image, and liturgical chalice depend on context
L412	<i>patena, -æ f.</i>	ordinary vessel and specialized liturgical object require contextual identification
L413	<i>ritus, -us m.</i>	ordinary manner, customary observance, and defined liturgical rite require context
L089	<i>gratia, -æ f.</i>	sense follows construction; gratias commonly means thanks
L090	<i>gloria, -æ f.</i>	sense follows subject, possessor, and register
L091	<i>pax, pacis f.</i>	stem pac-; often subject, object, or wished good

ID	Citation form	Usage / government
L092	<i>fides, fidei f.</i>	context distinguishes belief, trust, and faithfulness
L380	<i>ibi</i>	may locate an event or resume a previously named place or stage in an argument
L385	<i>sursum</i>	modifies motion or orientation; liturgical use must still be parsed in its clause
L391	<i>mane</i>	often functions as a time expression without a preposition; parse from the clause
L396	<i>procul</i>	may be absolute or take a complement according to usage; distinguish position from motion

13.6 M13-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G052	Ellipsis and reconstruction <i>word order</i>	State the boundary on supplying omitted words.	Supply a word only when grammar or a strong parallel requires or licenses it; place the supply in brackets. Reconstruction preserves every printed form and is an analytical scaffold, not a rewritten source.
G054	Genre and register <i>reading method</i>	Distinguish genre from register.	Genre is a recurring kind of text defined by task and convention, such as Collect or narrative. Register is a variety associated with use or setting, such as biblical, juridical, or liturgical Latin. Neither overrides the printed grammar.
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.
G077	Direct reading and lookup discipline <i>reading method</i>	State a responsible order for reading before and after consulting aids.	Mark finite verbs, clause boundaries, agreement, and government from the printed text; propose a provisional structure; then consult a complete lexical or grammatical entry and revise visibly. A gloss or translation may test an analysis but must not replace it.

13.7 M13-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Parse and expand *hostia / in / altari / est*.

Model and points to check. *Hostia in altari est*. *Hostia* is nominative subject; *in altari* is an ablative location phrase.

13.8 M13-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write two ordinary analytical clauses using four words from the prayer-and-offering family.

Model and points to check. Model: *Donum ad altare portatur. Prex in ecclesia auditur.* Both are project-created practice clauses.

CHAPTER 14

M14: Orations and Petitions — models and checks

Packet memory key: M14. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

14.1 M14-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

14.5 M14-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L105	<i>oro, -are, -avi, -atum</i>	person, object, or clause construction follows context
L106	<i>concedo, -ere, concessi, concessum</i>	often takes a thing and a recipient or dependent clause
L107	<i>tribuo, -ere, tribui, tributum</i>	thing commonly accusative and recipient dative
L108	<i>largior, -iri, largitus sum</i>	normally takes an object and may take a dative recipient
L109	<i>offero, offerre, obtuli, oblatum</i>	normally takes an accusative object and often dative recipient
L110	<i>suscipio, -ere, suscepi, susceptum</i>	normally takes an accusative object
L111	<i>benedico, -ere, benedixi, benedictum</i>	complement varies across periods; follow the actual source
L112	<i>sanctifico, -are, -avi, -atum</i>	normally takes an accusative object
L414	<i>præsto, -are, præstiti, præstitum</i>	takes an object in the sense provide; other senses and complements require context
L415	<i>exaudio, -ire, exaudivi, exauditum</i>	normally takes an accusative person, prayer, or petition; not every act of hearing implies granting
L416	<i>adiuvo, -are, adiuvi, adiutum</i>	normally takes an accusative person or cause assisted
L417	<i>libero, -are, -avi, -atum</i>	takes an accusative object; what one is freed from may use <i>a/ab, ex</i> , or ablative according to usage
L418	<i>propitior, propitiari, propitius sum</i>	commonly governs the dative of the person or thing favored
L419	<i>mereor, mereri, meritus sum</i>	may take an object or infinitive; theological contexts require careful interpretation rather than an isolated gloss
L420	<i>dignor, dignari, dignatus sum</i>	may take an object with predicate or an infinitive in later usage; verify the actual construction
L421	<i>supplico, -are, -avi, -atum</i>	commonly governs the dative of the person addressed
L422	<i>invoco, -are, -avi, -atum</i>	normally takes an accusative person or name called upon
L423	<i>adoro, -are, -avi, -atum</i>	normally takes an accusative object; bodily gesture, worship, and petition depend on context
L424	<i>agnosco, -ere, agnovi, agnitum</i>	normally takes an accusative object or a content clause
L425	<i>placeo, -ere, placui, placitum</i>	the person pleased is commonly dative; impersonal forms may express a decision
L426	<i>dirigo, -ere, direxi, directum</i>	normally takes an accusative object; destination or standard may be added by construction
L427	<i>purgo, -are, -avi, -atum</i>	takes an accusative object; what is removed may be expressed by ablative or a phrase
L428	<i>mundo, -are, -avi, -atum</i>	normally takes an accusative object; distinguish from the noun <i>mundus</i>
L429	<i>renovo, -are, -avi, -atum</i>	normally takes an accusative object; physical, moral, and sacramental senses depend on context
L430	<i>protego, -ere, protexi, protectum</i>	normally takes an accusative object; the danger opposed follows context
L097	<i>altare, altaris n.</i>	often occurs with <i>ad</i> or <i>in</i> ; case follows relation
L098	<i>ecclesia, -æ f.</i>	capitalization does not determine grammatical role
L099	<i>sacrificium, -i n.</i>	context and complements narrow the sense
L100	<i>hostia, -æ f.</i>	distinguish from <i>hostis</i> , enemy
L397	<i>missa, -æ f.</i>	liturgical celebration and the older ordinary sense of dismissal require contextual distinction

ID	Citation form	Usage / government
L402	<i>evangelium, -i n.</i>	message, written Gospel, and liturgical Gospel reading require contextual distinction
L407	<i>introitus, -us m.</i>	ordinary entry, textual beginning, and liturgical chant are contextual senses
L413	<i>ritus, -us m.</i>	ordinary manner, customary observance, and defined liturgical rite require context

14.6 M14-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G041	Purpose and result <i>subordinate clauses</i>	Give the principal diagnostic contrast.	Both may use <i>ut</i> plus subjunctive. Purpose states an intended end and is negated by <i>ne</i> ; result states a consequence, is commonly negated by <i>ut non</i> , and often has degree or anticipatory signals. The governor and discourse decide.
G042	Indirect command <i>subordinate clauses</i>	Identify its architecture and negation.	A verb of asking, ordering, urging, or causing governs a content command, commonly <i>ut</i> or <i>ne</i> plus subjunctive. Classify the governing verb before assigning the clause.
G053	Collect architecture <i>liturgical genres</i>	Name the common analytical members without forcing every Collect into one template.	Look for address, relative or participial ground, main petition, requested purpose or effect, and conclusion. The actual finite verbs and dependencies control; a member may be absent, combined, or genuinely ambiguous.
G078	Oration architecture beyond the Collect <i>liturgical genres</i>	How should a Secret or Postcommunion be analyzed without assuming that it is simply a Collect with a new label?	Identify address if present, finite petition, offering or sacramental reference, requested effect, purpose, and conclusion from the actual syntax. Compare genre tendencies only after parsing, and preserve features that distinguish the prayer's liturgical position and task.

14.7 M14-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct the object series: *ecclesia / dona / suscipit / et / offert*.

Model and points to check. *Ecclesia dona suscipit et offert*. One subject and object serve both coordinated verbs.

14.8 M14-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a petition with a thing granted and a dative recipient, then an offering clause with a different recipient.

Model and points to check. Model: *Pacem nobis concede. Dona Deo offerimus.*

CHAPTER 15

M15: Lessons, Epistles, and Gospels — models and checks

Packet memory key: M15. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

15.1 M15-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

15.6 M15-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G034	Infinitive time and voice <i>non-finite verbs</i>	Name the six ordinary infinitives and how their time is read.	Present, perfect, and future, each active and passive. Their time is relative to the governing verb: simultaneous, prior, or subsequent, not automatically present, past, or future from the reader's moment.
G035	Indirect statement <i>non-finite syntax</i>	Identify its core architecture.	A verb of saying, thinking, perceiving, or related activity may govern an accusative subject plus infinitive. The infinitive's tense expresses relative time, and predicate complements agree as their construction requires.
G037	The four participles <i>non-finite verbs</i>	Name their ordinary time and voice relations.	Present active: simultaneous active action. Perfect passive: prior passive action. Future active: subsequent or intended active action. Gerundive: future/passive verbal adjective whose force depends on construction.
G044	Temporal, causal, and concessive relations <i>subordinate clauses</i>	Why does a conjunction alone not settle the relation or mood?	Forms such as <i>cum</i> , <i>dum</i> , <i>quia</i> , and <i>quamvis</i> take different constructions. Governor, mood, tense, discourse viewpoint, and wider sentence determine whether time, cause, concession, or another relation is present.
G050	Agent, means, manner, and cause <i>adverbial cases</i>	Give the principal contrast between personal agent and means.	A personal agent with a passive commonly uses <i>a/ab</i> plus ablative; an instrument or means commonly uses an unprepositioned ablative thing. Manner and cause require their own lexical and contextual evidence.

15.7 M15-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *Verbum / lux / est / populus / nomen / Dei / laudat.*

Model and points to check. *Verbum lux est; populus nomen Dei laudat.* The first clause has a predicate noun; the second has an object plus dependent genitive.

15.8 M15-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a three-clause paragraph using one image, one law or work noun, and one kingdom or people noun.

Model and points to check. Model: *Lux magna est. Populus legem legit. Regnum opus iustum habet.*

CHAPTER 16

M16: Chants, Prefaces, and the Canon — models and checks

Packet memory key: M16. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

16.1 M16-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

16.5 M16-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L121	<i>tempus, temporis n.</i>	stem tempor-; contextual range is broad
L122	<i>dies, diei m./f.</i>	gender varies with usage; learn the form in its phrase
L123	<i>res, rei f.</i>	highly context-sensitive; compounds and fixed phrases matter
L124	<i>causa, -æ f.</i>	with genitive may express for the sake of; context decides
L125	<i>ratio, rationis f.</i>	do not reduce its contextual range to modern reason
L126	<i>memoria, -æ f.</i>	word family with memor and commemoro
L127	<i>veritas, veritatis f.</i>	abstract noun; complements and contrast establish the local claim
L128	<i>sapientia, -æ f.</i>	distinguish practical, philosophical, and theological contexts
L448	<i>maiestas, maiestatis f.</i>	human dignity, sovereign majesty, and divine title or attribute require context
L449	<i>laus, laudis f.</i>	act, words, or object of praise depend on context
L450	<i>honor, honoris m.</i>	esteem, office, cultic honor, and rhetorical credit require context
L451	<i>virtus, virtutis f.</i>	ethical quality, valor, efficacy, and divine power are distinct contextual senses
L452	<i>adoratio, adorationis f.</i>	gesture, act of worship, and theological category require contextual distinction
L453	<i>creatura, -æ f.</i>	individual creature, created order, and rhetorical contrast with Creator depend on context
L454	<i>providentia, -æ f.</i>	human planning and divine providence require contextual distinction
L455	<i>incarnatio, incarnationis f.</i>	technical Christological and more general embodiment senses must be source-controlled
L456	<i>nativitas, nativitatis f.</i>	ordinary birth, feast title, and theological mystery depend on context
L457	<i>passio, passionis f.</i>	experience, suffering, Christ's Passion, and technical affect require context
L458	<i>resurrectio, resurrectionis f.</i>	narrative event, general resurrection, and liturgical mystery require context
L459	<i>ascensio, ascensionis f.</i>	ordinary ascent and liturgical or theological title depend on context
L460	<i>redemptio, redemptionis f.</i>	commercial, legal, biblical, and theological senses require contextual distinction
L461	<i>salus, salutis f.</i>	physical welfare, public safety, greeting, and theological salvation depend on context
L462	<i>culpa, -æ f.</i>	legal responsibility, moral fault, and liturgical confession require context
L463	<i>peccatum, -i n.</i>	act, state, collective sin, and technical theological use depend on number and context
L464	<i>remissio, remissionis f.</i>	physical relaxation, legal remission, and forgiveness of sins require context
L113	<i>lux, lucis f.</i>	stem luc-; literal or figurative sense follows context
L114	<i>verbum, -i n.</i>	capitalization may signal a title but does not determine syntax
L115	<i>nomen, nominis n.</i>	stem nomin-; learn governing constructions from the sentence
L116	<i>populus, -i m.</i>	collective singular; verb agreement follows the grammatical number
L431	<i>discipulus, -i m.</i>	ordinary pupil and religious disciple depend on context; feminine is separately formed

ID	Citation form	Usage / government
L434	<i>angelus, -i m.</i>	heavenly being and ordinary messenger depend on source and context
L438	<i>rex, regis m.</i>	stem <i>reg-</i> ; literal ruler, divine title, and figurative use depend on context
L447	<i>cæcus, -a, -um</i>	literal inability to see and figurative lack of perception require contextual evidence

16.6 M16-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G052	Ellipsis and reconstruction <i>word order</i>	State the boundary on supplying omitted words.	Supply a word only when grammar or a strong parallel requires or licenses it; place the supply in brackets. Reconstruction preserves every printed form and is an analytical scaffold, not a rewritten source.
G054	Genre and register <i>reading method</i>	Distinguish genre from register.	Genre is a recurring kind of text defined by task and convention, such as Collect or narrative. Register is a variety associated with use or setting, such as biblical, juridical, or liturgical Latin. Neither overrides the printed grammar.
G057	Poetic syntax remains syntax <i>poetry foundations</i>	State the first rule for approaching an unfamiliar line.	Identify forms, agreement, government, finite and non-finite predicates, and clause boundaries before rearranging. Meter and emphasis may separate connected words, but they do not cancel morphology.
G079	Periodic syntax <i>prose style</i>	How should a long period be reduced without destroying its architecture?	Bracket subordinate units, identify the principal finite verb and its arguments, trace connectors and parallel members, and write a proposition outline. Then return to the received order to explain suspense, balance, climax, or qualification.

16.7 M16-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Build two copular clauses from *veritas / magna / res / est / tempus / longum / est*.

Model and points to check. *Veritas magna res est; tempus longum est.*

16.8 M16-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three connected claims using *causa*, *ratio*, *memoria*, and *sapientia*; keep the syntax simple enough to verify.

Model and points to check. Model: *Sapientia rationem quærit. Memoria causam servat. Veritas in memoria manet.* The verbs are supplied project vocabulary.

CHAPTER 17

M17: Temporal, Sanctoral, and Commons — models and checks

Packet memory key: M17. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

17.1 M17-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

17.6 M17-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G028	Personal and reflexive reference <i>pronouns</i>	State the distinction between a third-person reflexive and a non-reflexive pronoun.	The reflexive refers back to the subject of its governing domain; a non-reflexive third-person form points elsewhere or resumes an antecedent. Case still follows the pronoun's own function.
G029	Demonstratives <i>pronouns</i>	What must be recorded when parsing a demonstrative?	Give lemma, gender, number, case, syntactic function, and contextual referent or discourse force. Near/far English glosses are only starting points.
G030	The relative-pronoun two-axis rule <i>pronouns</i>	State how a relative pronoun receives gender, number, and case.	Gender and number normally come from the antecedent; case comes from the relative pronoun's function inside its own clause.
G053	Collect architecture <i>liturgical genres</i>	Name the common analytical members without forcing every Collect into one template.	Look for address, relative or participial ground, main petition, requested purpose or effect, and conclusion. The actual finite verbs and dependencies control; a member may be absent, combined, or genuinely ambiguous.
G054	Genre and register <i>reading method</i>	Distinguish genre from register.	Genre is a recurring kind of text defined by task and convention, such as Collect or narrative. Register is a variety associated with use or setting, such as biblical, juridical, or liturgical Latin. Neither overrides the printed grammar.

17.7 M17-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Order and parse *puer / discit / intellegit / respondet*.

Model and points to check. *Puer discit, intellegit, respondet*. All three verbs are third singular present active indicative.

17.8 M17-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a short question-and-answer sequence using three knowing or teaching verbs.

Model and points to check. Model: *Puella quærit; puer respondet. Magister docet, et ambo intellegunt.* *Magister* and *ambo* are supplied and glossed by the prompt context.

CHAPTER 18

M18: Holy Week, Requiem, and the Complete Mass — models and checks

Packet memory key: M18. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

18.1 M18-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

18.6 M18-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G050	Agent, means, manner, and cause <i>adverbial cases</i>	Give the principal contrast between personal agent and means.	A personal agent with a passive commonly uses <i>a/ab</i> plus ablative; an instrument or means commonly uses an unprepositioned ablative thing. Manner and cause require their own lexical and contextual evidence.
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G052	Ellipsis and reconstruction <i>word order</i>	State the boundary on supplying omitted words.	Supply a word only when grammar or a strong parallel requires or licenses it; place the supply in brackets. Reconstruction preserves every printed form and is an analytical scaffold, not a rewritten source.
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.
G077	Direct reading and lookup discipline <i>reading method</i>	State a responsible order for reading before and after consulting aids.	Mark finite verbs, clause boundaries, agreement, and government from the printed text; propose a provisional structure; then consult a complete lexical or grammatical entry and revise visibly. A gloss or translation may test an analysis but must not replace it.

18.7 M18-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Make agreement exact: *Deus / misericors / iustus / est / populus / fidelis / semper / orat.*

Model and points to check. *Deus misericors et iustus est; populus fidelis semper orat.*

18.8 M18-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write one attributive and one predicate use of two different adjectives from this set.

Model and points to check. Model: *Populus fidelis orat. Populus fidelis est.*

CHAPTER 19

M19: Register and Biblical Texture — models and checks

Packet memory key: M19. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

19.1 M19-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

19.6 M19-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G033	Postpositive particles <i>discourse syntax</i>	Define postpositive and name three common examples.	A postpositive normally stands after the first word or constituent of its clause while organizing the discourse. Common examples are <i>autem</i> , <i>enim</i> , and often <i>igitur</i> ; <i>quoque</i> normally follows its focus.
G044	Temporal, causal, and concessive relations <i>subordinate clauses</i>	Why does a conjunction alone not settle the relation or mood?	Forms such as <i>cum</i> , <i>dum</i> , <i>quia</i> , and <i>quamvis</i> take different constructions. Governor, mood, tense, discourse viewpoint, and wider sentence determine whether time, cause, concession, or another relation is present.
G054	Genre and register <i>reading method</i>	Distinguish genre from register.	Genre is a recurring kind of text defined by task and convention, such as Collect or narrative. Register is a variety associated with use or setting, such as biblical, juridical, or liturgical Latin. Neither overrides the printed grammar.
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.

19.7 M19-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct the condition *si / veritatem / cognoscimus / ita / iudicamus*.

Model and points to check. *Si veritatem cognoscimus, ita iudicamus*. The two indicative clauses present an open logical relation in this project sentence.

19.8 M19-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write four short clause pairs using *si*, *nisi*, *quoniam*, and *quamvis*; label relation and mood.

Model and points to check. Model: *Si discimus, intellegimus. Nisi legimus, non respondemus. Quoniam discimus, respondemus. Quamvis discamus, erramus.* The final contrast is project-created and its subjunctive is deliberate.

20.6 M20-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.
G070	Figure and function <i>rhetoric</i>	What turns a figure label into analysis?	Quote the corresponding Latin forms, prove their grammatical relation, and explain how repetition, balance, antithesis, sound, or displacement directs attention and develops the thought.
G079	Periodic syntax <i>prose style</i>	How should a long period be reduced without destroying its architecture?	Bracket subordinate units, identify the principal finite verb and its arguments, trace connectors and parallel members, and write a proposition outline. Then return to the received order to explain suspense, balance, climax, or qualification.

20.7 M20-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *ius / potestas / auctoritas / res / diversæ / sunt*; explain agreement.

Model and points to check. *Ius, potestas et auctoritas res diversæ sunt.* The supplied predicate noun *res* and adjective *diversæ* are feminine plural, gathering the coordinated subjects under a plural predication.

20.8 M20-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three definitions that keep *ius*, *potestas*, and *auctoritas* distinct without claiming a complete legal theory.

Model and points to check. Model: *Ius regula iusta est. Potestas facultas agendi est. Auctoritas pondus testimonii est.* These are deliberately simplified project definitions, not canonical propositions.

21.6 M21-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G051	Marked word order and hyperbaton <i>word order</i>	What must be proved before a stylistic effect is proposed?	First prove syntactic attachment from agreement, government, and clause structure. Then compare a neutral scaffold with the printed order and explain what separation or placement foregrounds.
G055	Proposition-first composition <i>composition</i>	State a reliable order for drafting a paragraph.	List the propositions and their logical relations; select Latin clause architecture and attested constructions; choose vocabulary; draft the finite-verb skeleton; then complete agreement and idiom. Do not let an English sentence dictate the Latin structure.
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.
G080	Textual collation <i>source discipline</i>	What belongs in a minimal collation record?	Name the witnesses and editions, transcribe the exact variant with sufficient context, distinguish spelling or punctuation from substantive difference, state which reading the lesson uses, and record the reason without inventing certainty about genealogy or authorial intention.

21.7 M21-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Build a sentence from *doctrina / voluntatem / format / oratio / sententiam / explicat*.

Model and points to check. *Doctrina voluntatem format; oratio sententiam explicat.* *format* and *explicat* are supplied project verbs.

21.8 M21-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-sentence paragraph linking memory, desire, community, teaching, and discourse.

Model and points to check. Model: *Memoria doctrinam servat. Desiderium voluntatem movet. Civitas doctrinam audit. Oratio sententiam explicat.* Supplied verbs are project vocabulary.

CHAPTER 22

M22: Guided Composition and Independent Research — models and checks

Packet memory key: M22. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

22.1 M22-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

22.6 M22-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G055	Proposition-first composition <i>composition</i>	State a reliable order for drafting a paragraph.	List the propositions and their logical relations; select Latin clause architecture and attested constructions; choose vocabulary; draft the finite-verb skeleton; then complete agreement and idiom. Do not let an English sentence dictate the Latin structure.
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.
G081	Research and idiom ledger <i>independent study</i>	What records make independent reading and composition auditable?	For each received passage, record edition, work, locus, text checked, and any unresolved variant. For each borrowed construction or idiom, record the exact source context and the new use; label adaptation and project composition plainly, and keep conjecture distinct from verified evidence.

22.7 M22-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *puer / sententias / componit / corrigit / defendit*; identify shared elements.

Model and points to check. *Puer sententias componit, corrigit et defendit.* One subject and one object serve three coordinated verbs.

22.8 M22-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Draft a five-sentence analytical paragraph that demonstrates, distinguishes, explains, corrects, and defends one simple claim.

Model and points to check. Model: *Veritatem demonstro. Verum a falso distinguo. Rationem explico. Sententiam obscuram corrigo. Sententiam correctam defendo.* This is a project model for architecture, not a received stylistic passage.

Part V

Advanced Poetry-Branch Models and Checks

CHAPTER 1

P1: Textual Prosody — models and checks

Packet memory key: P1. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

1.1 P1-S — New-lexeme study sheet

Copy each complete entry, then cover the table and reconstruct citation form, project gloss, morphology, and principal usage. The strand is a teaching allocation, not a claim that this lexeme has been checked in a named author.

1.4 P1-MORPH — Morphology retrieval

Supply the dictionary information that permits an unfamiliar printed form to be parsed: declension and gender, adjective pattern, principal parts, conjugation, or indeclinable class as appropriate.

ID	Citation form	Morphological facts
L177	<i>poeta, -æ m.</i>	noun; first declension; masculine
L178	<i>carmen, carminis n.</i>	noun; third declension; neuter

1.5 P1-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L177	<i>poeta, -æ m.</i>	lexical gender is masculine despite first-declension endings
L178	<i>carmen, carminis n.</i>	genre and setting determine song, poem, or formal utterance
L567	<i>prosodia, -æ f.</i>	identify the exact system under discussion: quantity, meter, syllable count, or another later pattern
L568	<i>vocalis, vocalis f.</i>	identify the written vowel and syllabic role; this is not a pronunciation direction
L569	<i>diphthongus, -i f.</i>	record the written vowel pair and test its metrical treatment with the supplied P1 rules and examples
L570	<i>elisio, elisionis f.</i>	mark the word boundary and candidate sounds, then test the actual metrical scheme
L169	<i>compono, -ere, composui, compositum</i>	takes an object; style or reconciliation senses follow context
L170	<i>explico, -are, -avi, -atum</i>	normally takes an object; figurative sense develops from unfolding
L171	<i>demonstro, -are, -avi, -atum</i>	takes an object or clause; strength of proof follows context
L172	<i>distinguo, -ere, distinxi, distinctum</i>	takes objects or contrasted members
L550	<i>affirmo, -are, -avi, -atum</i>	takes an object or content statement; distinguish proof from mere assertion
L558	<i>interpretor, interpretari, interpretatus sum</i>	normally takes an object; explanatory and translational work require an identified source text
L563	<i>argumentor, argumentari, argumentatus sum</i>	may be intransitive or take the matter argued; evidence and conclusion should be stated
L566	<i>expono, -ere, exposui, expositum</i>	takes an object; physical placement, narration, and systematic exposition require context

1.6 P1-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G057	Poetic syntax remains syntax <i>poetry foundations</i>	State the first rule for approaching an unfamiliar line.	Identify forms, agreement, government, finite and non-finite predicates, and clause boundaries before rearranging. Meter and emphasis may separate connected words, but they do not cancel morphology.
G058	Syllable division for scansion <i>poetry foundations</i>	State a cautious working procedure.	Divide words into syllables by vowels and diphthongs, assigning intervocalic consonants by the rules and examples printed in P1. Mark uncertainty and test the division against the supplied quantity sheet and verse; this analytical operation is not a pronunciation guide.
G059	Quantity by nature and position <i>metrical quantity</i>	Distinguish the two.	A syllable is long by nature when its vowel or diphthong is inherently long in the word or form; it is long by position when its vowel is followed by the consonantal structure that closes or weights the syllable under the meter's rules. A printed Missal without macrons does not supply all quantities.
G060	Common quantitative feet <i>metrical quantity</i>	Write the patterns for dactyl, spondee, iamb, and trochee.	Dactyl: long–short–short. Spondee: long–long. Iamb: short–long. Trochee: long–short. A metrical scheme does not by itself specify spoken realization.
G061	Elision <i>scansion</i>	State the cautious working rule.	At a word boundary, a final vowel or vowel plus <i>m</i> may be elided before a following vowel or <i>h</i> plus vowel under the verse's rules. Mark the candidate, test the meter, and retain any genuine textual uncertainty.

1.7 P1-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *poeta / carmen / componit*.

Model and points to check. *Poeta carmen componit*. *Poeta* is masculine nominative despite first-declension form.

1.8 P1-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three prose statements distinguishing poet, poem, and act of composition.

Model and points to check. Model: *Poeta carmen componit. Carmen verba ordinat. Compositio laborem requirit.* Supplied words are project vocabulary.

2.6 P2-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G060	Common quantitative feet <i>metrical quantity</i>	Write the patterns for dactyl, spondee, iamb, and trochee.	Dactyl: long–short–short. Spondee: long–long. Iamb: short–long. Trochee: long–short. A metrical scheme does not by itself specify spoken realization.
G061	Elision <i>scansion</i>	State the cautious working rule.	At a word boundary, a final vowel or vowel plus <i>m</i> may be elided before a following vowel or <i>h</i> plus vowel under the verse's rules. Mark the candidate, test the meter, and retain any genuine textual uncertainty.
G062	Dactylic hexameter <i>classical meters</i>	Describe its six-foot frame.	The line has six feet. The first four may normally be dactyls or spondees; the fifth is usually a dactyl; the sixth is a spondee or trochaic close. Substitution and elision must be tested on the actual line.
G063	Caesura <i>metrical structure</i>	Define it and distinguish it from punctuation.	A caesura is a word break within a metrical foot that helps articulate the line. Punctuation may coincide with it but does not establish it; scan the feet and word boundaries first.

2.7 P2-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *carmen / quattuor / versus / habet / versus / unum / metrum / servant.*

2.8 P2-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a prose inventory of a short poem: number of lines, proposed meter, and one uncertainty.

Model and points to check. Model: *Carmen quattuor versus habet. Metrum adhuc incertum est. Quantitas unius syllabæ examinanda est.*

L571	<i>dactylus</i> , -i m.	metrical foot with long–short–short pattern; prove it from the scanned positions
L573	<i>hexameter</i> , <i>hexametri</i> m.	name the line only after testing its six-foot quantitative scheme

3.6 P3-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G063	Caesura <i>metrical structure</i>	Define it and distinguish it from punctuation.	A caesura is a word break within a metrical foot that helps articulate the line. Punctuation may coincide with it but does not establish it; scan the feet and word boundaries first.
G064	Enjambment <i>poetic syntax</i>	Define it in syntactic terms.	Enjambment carries a syntactic unit across a line boundary. Identify the unfinished dependency and explain how delayed completion changes emphasis or movement; do not treat every run-on line as equally significant.
G065	The elegiac couplet <i>classical meters</i>	State its high-level structure.	An elegiac couplet pairs a dactylic hexameter with an elegiac pentameter. The second line has the strongly divided two-half structure printed in P3; test its division, substitutions, and ending from that complete supplied pattern rather than analogy alone.

3.7 P3-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct the project definition *versus / in / syllabas / et / pedes / dividitur*.

Model and points to check. *Versus in syllabas et pedes dividitur*. Both *in*-phrases use accusative because analytical division into units is expressed.

3.8 P3-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write three prose sentences explaining how syllables form feet and feet form a line.

Model and points to check. Model: *Syllabæ pedes constituunt. Pedes versum constituunt. Metrum ordinem pedum regit.*

L578	<i>hemistichium, -i n.</i>	locate the division from meter and syntax rather than page typography alone

4.6 P4-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G059	Quantity by nature and position <i>metrical quantity</i>	Distinguish the two.	A syllable is long by nature when its vowel or diphthong is inherently long in the word or form; it is long by position when its vowel is followed by the consonantal structure that closes or weights the syllable under the meter's rules. A printed Missal without macrons does not supply all quantities.
G060	Common quantitative feet <i>metrical quantity</i>	Write the patterns for dactyl, spondee, iamb, and trochee.	Dactyl: long–short–short. Spondee: long–long. Iamb: short–long. Trochee: long–short. A metrical scheme does not by itself specify spoken realization.
G066	Lyric strophes <i>classical meters</i>	Why must each lyric form be learned as its own pattern?	Lyric meters combine long and short positions in fixed line and stanza patterns. The greater Asclepiadean line taught in P4 cannot be inferred safely from line length; use the supplied scheme and test every position in each line.

4.7 P4-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *syllaba / longa / vel / brevis / est / quantitas / examinatur*.

Model and points to check. *Syllaba longa vel brevis est; quantitas examinatur.*

4.8 P4-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-step prose checklist for marking quantity without giving pronunciation directions.

Model and points to check. Model: *Syllabas divide. Vocales nota. Positionem examina. Quantitatem cum metro compara.*

G067	Poetic word order <i>poetic syntax</i>	Give a disciplined reconstruction method.	Mark agreement pairs and governed complements, bracket clauses, and write a neutral prose scaffold without changing any form. Return to the printed order to explain framing, delay, interlocking, or contrast.
G068	Poetic ellipsis and compression <i>poetic syntax</i>	What prevents over-supplying a poetic line?	Require grammatical necessity, a strong parallel, or clear contextual licensing. Mark every supply in brackets and test whether the printed forms already permit a complete analysis.
G069	Poetic diction and allusion <i>literary reading</i>	What evidence supports a claim of marked diction or allusion?	Identify the exact word, form, construction, or verbal overlap; compare an adequate source context; test ordinary alternatives; and scale the claim to the evidence. A rare gloss or two common words do not prove dependence.
G070	Figure and function <i>rhetoric</i>	What turns a figure label into analysis?	Quote the corresponding Latin forms, prove their grammatical relation, and explain how repetition, balance, antithesis, sound, or displacement directs attention and develops the thought.

6.5 P6-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L187	<i>imago, imaginis f.</i>	literal, rhetorical, and theological senses require context
L188	<i>figura, -æ f.</i>	rhetorical, grammatical, and typological senses differ
L587	<i>rhythmus, -i m.</i>	name only the organization actually supported: quantity, syllable count, line grouping, repeated syntax, written endings, or another stated pattern
L588	<i>accentus, -us m.</i>	recognize that its technical sense depends on a stated system; this course neither assigns lexical stress nor teaches pronunciation
L589	<i>rima, -æ f.</i>	rhyme classifies recurring terminal sound; record visible ending correspondence separately and withhold a rhyme claim when no phonological evidence is supplied
L590	<i>tropus, -i m.</i>	rhetorical figure, chant addition, and modal terminology require contextual distinction
L185	<i>cæsuræ, -æ f.</i>	locate from the actual metrical structure, not punctuation alone
L186	<i>ictus, -us m.</i>	use as analytical metalanguage without turning it into a pronunciation rule
L583	<i>typologia, -æ f.</i>	identify exact earlier and later texts and state the warranted relation; resemblance alone is insufficient
L584	<i>symbolum, -i n.</i>	ordinary token, literary symbol, and ecclesiastical creed are distinct contextual senses
L585	<i>allusio, allusionis f.</i>	claim only after exact verbal, formal, or contextual evidence is compared with a plausible source
L586	<i>paradoxon, -i n.</i>	state the apparent conflict and explain its resolution or rhetorical function from context

6.6 P6-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G068	Poetic ellipsis and compression <i>poetic syntax</i>	What prevents over-supplying a poetic line?	Require grammatical necessity, a strong parallel, or clear contextual licensing. Mark every supply in brackets and test whether the printed forms already permit a complete analysis.
G069	Poetic diction and allusion <i>literary reading</i>	What evidence supports a claim of marked diction or allusion?	Identify the exact word, form, construction, or verbal overlap; compare an adequate source context; test ordinary alternatives; and scale the claim to the evidence. A rare gloss or two common words do not prove dependence.
G070	Figure and function <i>rhetoric</i>	What turns a figure label into analysis?	Quote the corresponding Latin forms, prove their grammatical relation, and explain how repetition, balance, antithesis, sound, or displacement directs attention and develops the thought.
G071	Syllabic and page-rhythmic verse <i>later poetry</i>	State the boundary between this study and pronunciation.	Later Latin verse may organize syllable count, line grouping, parallel syntax, repeated wording, written endings, or another pattern rather than classical quantity alone. Identify and document what the complete supplied poem visibly establishes; spelling alone does not prove stress, rhyme, or pronunciation.

6.7 P6-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *imago / et / figura / sensum / carminis / augent.*

Model and points to check. *Imago et figura sensum carminis augent.* The compound subject controls plural *augent*.

6.8 P6-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write a four-sentence note that identifies an image, names a figure, proves its grammar, and states its effect.

Model and points to check. Model: *Imago lucis apparet. Figura est anaphora. Idem verbum ter repetitur. Repetitio lucem ante oculos ponit.*

CHAPTER 7

P7: Poetic Commentary — models and checks

Packet memory key: P7. Work by study event, not by a calendar. A dependable return means that citation forms, core senses, morphological facts, constructions, and the packet's grammar explanations can be produced on fresh material without first looking at the model.

7.1 P7-S — New-lexeme study sheet

7.6 P7-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G056	Evidence classes in source work <i>source discipline</i>	Distinguish received text, adaptation, and project composition.	Received text reproduces an identified witness; an adaptation visibly changes a received base and records the change; project composition is new instructional Latin. None may be presented under another class merely because its wording sounds plausible.
G063	Caesura <i>metrical structure</i>	Define it and distinguish it from punctuation.	A caesura is a word break within a metrical foot that helps articulate the line. Punctuation may coincide with it but does not establish it; scan the feet and word boundaries first.
G064	Enjambment <i>poetic syntax</i>	Define it in syntactic terms.	Enjambment carries a syntactic unit across a line boundary. Identify the unfinished dependency and explain how delayed completion changes emphasis or movement; do not treat every run-on line as equally significant.
G069	Poetic diction and allusion <i>literary reading</i>	What evidence supports a claim of marked diction or allusion?	Identify the exact word, form, construction, or verbal overlap; compare an adequate source context; test ordinary alternatives; and scale the claim to the evidence. A rare gloss or two common words do not prove dependence.
G070	Figure and function <i>rhetoric</i>	What turns a figure label into analysis?	Quote the corresponding Latin forms, prove their grammatical relation, and explain how repetition, balance, antithesis, sound, or displacement directs attention and develops the thought.

7.7 P7-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *poeta / carmen / canit / et / versus / modulatur*.

Model and points to check. *Poeta carmen canit et versus modulatur*. *Modulatur* is deponent with active sense.

7.8 P7-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Write project prose explaining the difference between composing, singing, and scanning a poem.

Model and points to check. Model: *Poeta carmen componit et canit. Lector autem versus scandit. Scansio formam examinat, non cantum præscribit.*

8.4 P8-MORPH — Morphology retrieval

Supply the dictionary information that permits an unfamiliar printed form to be parsed: declension and gender, adjective pattern, principal parts, conjugation, or indeclinable class as appropriate.

ID	Citation form	Morphological facts
L191	<i>hymnus, -i m.</i>	noun; second declension; masculine
L192	<i>sequentia, -æ f.</i>	noun; first declension; feminine
L595	<i>compositio, compositionis f.</i>	noun; third declension; feminine
L596	<i>emendatio, emendationis f.</i>	noun; third declension; feminine
L597	<i>imitatio, imitationis f.</i>	noun; third declension; feminine
L598	<i>inventio, inventionis f.</i>	noun; third declension; feminine
L187	<i>imago, imaginis f.</i>	noun; third declension; feminine
L188	<i>figura, -æ f.</i>	noun; first declension; feminine
L587	<i>rhythmus, -i m.</i>	noun; second declension; masculine; Greek loanword
L588	<i>accentus, -us m.</i>	noun; fourth declension; masculine
L589	<i>rima, -æ f.</i>	noun; first declension; feminine; medieval and later term
L590	<i>tropus, -i m.</i>	noun; second declension; masculine; Greek loanword

8.5 P8-GOV — Usage and government retrieval

State the principal construction, governed case, complement pattern, or lexical warning. Then write one short project sentence that exhibits it.

ID	Citation form	Usage / government
L191	<i>hymnus, -i m.</i>	genre label requires source and context, not devotional subject alone
L192	<i>sequentia, -æ f.</i>	liturgical-poetic genre and ordinary sequence are contextual senses
L595	<i>compositio, compositionis f.</i>	physical combination, stylistic arrangement, and written composition require context
L596	<i>emendatio, emendationis f.</i>	distinguish correcting one's project draft from conjecturally changing a received text
L597	<i>imitatio, imitationis f.</i>	name the received model and exact feature imitated; label new wording as project composition
L598	<i>inventio, inventionis f.</i>	finding evidence, devising subject matter, and rhetorical discovery require context
L189	<i>cano, canere, cecini, cantum</i>	may take an object; do not infer performance details from the lemma alone
L190	<i>modulor, modulari, modulatus sum</i>	technical or musical sense follows the source context
L591	<i>lemma, lemmatis n.</i>	quote the exact source wording and identify its locus before commenting
L592	<i>scholium, -i n.</i>	distinguish ancient or medieval annotation from a modern project note and cite its witness
L593	<i>interpretatio, interpretationis f.</i>	state whether the work explains grammar, meaning, rhetoric, theology, or translates wording
L594	<i>enarratio, enarrationis f.</i>	identify the text expounded and distinguish source paraphrase from original explanation

8.6 P8-GRAM — Grammar-fact retrieval

Answer in complete grammatical language and give a Latin example where the prompt permits one. Compare the model only after a fresh attempt.

ID	Fact	Prompt	Response
G055	Proposition-first composition <i>composition</i>	State a reliable order for drafting a paragraph.	List the propositions and their logical relations; select Latin clause architecture and attested constructions; choose vocabulary; draft the finite-verb skeleton; then complete agreement and idiom. Do not let an English sentence dictate the Latin structure.
G069	Poetic diction and allusion <i>literary reading</i>	What evidence supports a claim of marked diction or allusion?	Identify the exact word, form, construction, or verbal overlap; compare an adequate source context; test ordinary alternatives; and scale the claim to the evidence. A rare gloss or two common words do not prove dependence.
G070	Figure and function <i>rhetoric</i>	What turns a figure label into analysis?	Quote the corresponding Latin forms, prove their grammatical relation, and explain how repetition, balance, antithesis, sound, or displacement directs attention and develops the thought.
G071	Syllabic and page-rhythmic verse <i>later poetry</i>	State the boundary between this study and pronunciation.	Later Latin verse may organize syllable count, line grouping, parallel syntax, repeated wording, written endings, or another pattern rather than classical quantity alone. Identify and document what the complete supplied poem visibly establishes; spelling alone does not prove stress, rhyme, or pronunciation.
G072	Poetic imitation and composition <i>composition</i>	State a safe progression from reading to original verse.	Scan and parse a received model; describe its meter, syntax, diction, and rhetorical movement; imitate one feature with visibly project-created content; check grammar and scheme independently; then attempt an original poem without presenting it as received text.

8.7 P8-RECON — Sentence reconstruction

Reconstruct before consulting any model. Account for every supplied form, then annotate agreement, government, and clause structure.

Prompt. Reconstruct *hymnus / et / sequentia / carmina / sunt / genus / ex / forma / et / usu / cognoscitur.*

Model and points to check. *Hymnus et sequentia carmina sunt; genus ex forma et usu cognoscitur.*

8.8 P8-COMP — Cumulative composition

Plan the propositions first; draft, check every form and construction, revise, and only then compare the model. The model is one defensible project composition, not a sentence to imitate mechanically.

Prompt. Compose two short, visibly project-created rhythmic lines and annotate their grammar; do not present them as a received hymn.

Model and points to check. Model: *Lux vera corda recreat; / spes firma mentes roborat.* The two project lines use parallel subject–object–verb order; no claim of a received text or classical meter is made.

Part VI

Scope and Sources

CHAPTER 1

Scope and Qualifications

1.1 Companion role

This publication is EL-MW, the cumulative memory companion to Triptych's print-first Ecclesiastical Latin curriculum. It renders the same stable lexeme, grammar-fact, recurrence, reconstruction, and composition registries used by the individual packets. It therefore supports packet teaching and connected reading without replacing either one.

The principal destination is direct reading of the 1962 *Missale Romanum*. The curriculum deliberately begins with ordinary project Latin and extends through broader narrative, classical, biblical, patristic, ecclesiastical, juridical, and poetic work, because durable Missal reading depends on a real command of Latin rather than memorized liturgical fragments. Composition develops from the first transparent clauses through controlled imitation and independent prose. Poetry is introduced in the common trunk and becomes its own advanced branch. No pronunciation system is taught here.

1.2 Evidence, review, and rights

The lexeme registry's concise English senses, pedagogical strands, recurrence allocations, and every workbook prompt and model are project-created instructional content. They are not represented as quotations or as verified authorial usage. Received Latin belongs in the course's separately audited passage registry with an identifiable work, edition, locus, and verification state. A full dictionary and grammar remain useful reference works, but the forms, senses, construction cues, answer models, and recurrence sheets needed to complete this workbook are printed here.

This is a language-study aid, not an official liturgical book, critical edition, pronunciation course, or authority for a liturgical, theological, textual, or canonical judgment. No independent Latinist, liturgist, pedagogue, theologian, or ecclesiastical reviewer is claimed. The rights and distribution status of received works are not altered by their citation as reference corpora.

CHAPTER 2

References

These references identify and verify the received Latin printed in the course. Every passage, gloss, comparison text, and model needed for the work is already supplied in the packet or its course companions; consulting the source editions is not part of ordinary packet completion. Project explanation, translation, reconstruction, exercises, comparison sets, and compositions are distinguished from received wording by the P/R convention in the scope record.

2.1 Missal and biblical corpus

- Catholic Church, *Missale Romanum ex decreto SS. Concilii Tridentini restitutum, Summorum Pontificum cura recognitum*, editio typica (Rome: Typis Polyglottis Vaticanis, 1962). Page images control doubtful wording over OCR or a searchable presentation.
- The four complete course dossiers are listed separately so each stable ID remains legible:
 - MR62-FORM-ADV1: First Sunday of Advent, printed pp. 1–2;
 - MR62-FORM-PENT: Pentecost, pp. 356–358;
 - MR62-FORM-XII-PENT: Twelfth Sunday after Pentecost, pp. 392–393;
 - MR62-FORM-XXIII-PENT: Twenty-third Sunday after Pentecost, pp. 416–417.
 The identified page images were visually checked.
- *Biblia Sacra Vulgatae Editionis, Sixti V et Clementis VIII*, Michael Hetzenauer, ed. (1914), is the controlling biblical comparison witness where a passage record names it. A Missal reading remains a Missal reading even when it quotes or adapts Scripture.

2.2 Verified connected prose

- CAES-DUPONTET1900: Renatus Du Pontet, ed., *C. Iuli Caesaris Commentariorum pars prior* (Oxford: Clarendon, 1900), *Bellum Gallicum* 1.1.1.
- CIC-FALCONER1923: W. A. Falconer, ed., *De senectute, De amicitia, De divinatione* (Cambridge, MA: Harvard University Press, 1923), *Laelius* 6.20. The course reproduces no facing edition translation.
- HIER-CSEL54: Isidor Hilberg, ed., *S. Eusebii Hieronymi Epistulae*, CSEL 54 (Vienna and Leipzig: Tempsky and Freytag, 1910), *Epistula* 22.30.4.
- AUG-CSEL33: Pius Knöll, ed., *S. Aureli Augustini Confessionum libri XIII*, CSEL 33 (Vienna: Tempsky, 1896), *Confessiones* 1.1.1 and 10.27.38.
- AMB-KRAB1857: Johann Georg Krabinger, ed., *De officiis ministrorum libri III* (Tübingen: H. Laupp, 1857), 1.11.38.
- THOM-LEON4: *Sancti Thomae Aquinatis Opera omnia iussu impensaue Leonis XIII*, vol. 4 (Rome: Typographia Polyglotta, 1888), *Summa theologiae* I, q. 1, a. 1, corpus opening.

2.3 Verified poetry

- PHAED-POST1919: J. P. Postgate, ed., *Phaedri Fabulae Aesopiae* (Oxford: Clarendon, 1919), 1.1.1–6.
- VERG-HEND1891: John Henderson, ed., *Aeneid, Book I* (Toronto: Copp, Clark, 1891), 1.1–4.
- OVID-OWEN1885: S. G. Owen, ed., *P. Ovidi Nasonis Tristium libri V* (Oxford: Clarendon, 1885), 1.1.1–2.
- HOR-WICKGAR1912: E. C. Wickham and H. W. Garrod, eds., *Q. Horati Flacci opera* (Oxford: Clarendon, 1912), *Carmina* 1.11.
- MR62-FORM-PENT: the complete Pentecost Sequence in the 1962 Missal, printed p. 357.

The consulted print editions are public domain in the United States as recorded in the edition manifest. Their scans are verification witnesses and are not reproduced. All English renderings in the course are new project translations. Candidate passages by other authors remain outside the received course corpus until an exact edition and page have been checked.

2.4 Grammar and Reading Lexicon

The course's Reference Grammar and complete controlled Reading Lexicon are the immediate aids for packet work. The inherited comparison bibliography includes J. H. Allen and J. B. Greenough, *New Latin Grammar* (1903); Charles E. Bennett, *New Latin Grammar*, 1918 revision; Charlton T. Lewis and Charles

Short, *A Latin Dictionary* (1879); and Du Cange et al., *Glossarium mediae et infimae latinitatis*, L. Favre ed. (1883–1887).

Those works describe different strata and do not form one undifferentiated authority. A classical rule does not by itself establish a biblical, patristic, medieval, or stable liturgical development. Most inherited rule explanations lack a recorded locus-by-locus chain to those works, so the course does not claim that every rule or project gloss has received an independent external lexical audit.

2.5 Citation and normalization

Missal passages are cited by stable source ID, liturgical locus, genre, and printed pages; biblical passages by book, chapter, and verse; historical authors by work and section. Declared changes of *j/i*, *u/v*, ligature, capitalization, punctuation, accent, or line display are recorded apart from substantive variants. A prose-order reconstruction, scansion display, or composition remains P analysis even when every word derives from a received passage. The edition manifest, source ladder, poetry map, and passage inventory give the exact page-image locators and remaining evidence limits.
