

Ecclesiastical Latin

EL-I.10: Passive Voice and Deponent Verbs

Distinguish true passives, deponents, participles, and forms of *fio*, while preserving subject, agency, and agreement

A self-contained learning packet with a local reference card, enriched submodules, selected handwritten practice, a mastery record, and matching answers. This working study is not an official liturgical book or approved curriculum.

Corpus	1962 <i>Missale Romanum</i> ; Vulgate and ecclesiastical prose as supporting readers
Method	Print, annotate, parse, copy, transform, translate, and compose by hand
Pacing	Advance by demonstrated mastery; module packets use two focused sessions as a planning envelope
Document	Learning module; learner and terminal-key edition
Triptych: AI Driven Studies in Catholic Faith, Worship, and Law

Part I

Module Plan and Reference

CHAPTER 1

Plan, prerequisites, and advancement decision

Module ID	EL-I.10
Course stage	Stage I — Foundations
Prerequisites	EL-I.9 mastery: retrieve perfect stems and distinguish perfect-system time relations
Observable outcome	Distinguish true passives, deponents, participles, and forms of <i>fio</i> , while preserving subject, agency, and agreement
Printed practice	Worksheets I.37 (guided Variant A) and I.40 (independent Variant D), with terminal keys
Extension bank	Worksheets I.38 and I.39 remain optional remediation or delayed-recall variants
Next dependency	EL-I.11, Pronouns and Prepositions

1.1 Two focused sessions

Session 1 — guided acquisition. Learn present- and perfect-system passive formation and the subject/agent/means distinction, then complete Worksheet I.37 as the guided application.

Session 2 — transfer and gate. Apply the true-passive/deponent/participle/*fio* decision tree, complete Worksheet I.40 independently, and justify both morphology and meaning for every passive-looking form.

The two-session plan is a workload envelope, not permission to advance by elapsed time. Stop, correct in a different color, and use an omitted variant when the mastery evidence below is absent.

Advance when: Convert at least 18 of 20 active/passive forms without changing their other coordinates, build eight agreeing perfect passives, and classify at least nine of ten contextual passive-looking verbs as true passive, deponent, or *fio*.

CHAPTER 2

Module reference card

2.1 Terms, forms, and decisions to retrieve

- present-system passive personal endings and active–passive conversion;
- perfect passive participle agreement plus finite *sum*;
- personal agent with *a/ab* versus unprepositioned means; and
- deponent dictionary entries and active meanings, participles, and forms of *fio*.

2.2 High-risk contrast

Passive-looking morphology does not by itself establish passive meaning. A true passive, a deponent, a participle, and a form of *fio* require different lexical and syntactic evidence.

2.3 Working protocol

Before looking anything up, mark the finite verb or verbal center, propose dictionary forms, and record at least two formally possible readings where an ending is syncretic. Use the identified 1962 Missal and the course source record for received wording. A familiar English rendering does not replace a parse.

Part II

Core Lesson

CHAPTER 3

Unit 10: The Passive Voice and Deponent Verbs

On completing this unit, you can:

- form and parse present-system passive verbs;
- construct and translate perfect-system passives;
- distinguish personal agent from means or instrument; and
- recognize common deponents as passive in form but active in meaning.

3.1 Present-system passive forms

In the **active voice**, the grammatical subject is presented as acting or being in a state rather than receiving an action; in the **passive voice**, the subject receives the action. The **agent** is the person or being that performs a passive action, whether or not the sentence expresses that agent. The present passive personal endings are *-r*, *-ris* (or *-re*), *-tur*, *-mur*, *-mini*, *-ntur*. The grammatical subject receives the action; an expressed agent is not required.

	1st <i>laudor</i>	2nd <i>moneor</i>	3rd <i>regor</i>	3rd- <i>io</i> <i>capior</i>	4th <i>audior</i>
1 sg.	laudor	moneor	regor	capior	audior
2 sg.	laudaris	moneris	regeris	caperis	audiris
3 sg.	laudatur	monetur	regitur	capitur	auditur
1 pl.	laudamur	monemur	regimur	capimur	audimur
2 pl.	laudamini	monemini	regimini	capimini	audimini
3 pl.	laudentur	monentur	reguntur	capiuntur	audiuntur

Imperfect passives replace the active endings with passive endings after the same tense sign: *laudabar*, *monebar*, *regebar*, *capiebar*, *audiebar*. First- and second-conjugation futures begin *laudabor*, *laudaberis*, *laudabitur* and *monebor*, *moneberis*, *monebitur*; third, third-*io*, and fourth begin *regar*, *regeris*, *regetur*; *capiar*, *capieris*, *capietur*; and *audiar*, *audieris*, *audietur*. Present passive infinitives are *laudari*, *moneri*, *regi*, *capi*, *audiri*; note the third-conjugation *-i*, not *-eri*.

3.2 Perfect-system passives

The fourth principal part supplies the **perfect passive participle**, a verbal adjective expressing action received and prior to the reference point. Combine it with a form of *sum*, making the participle agree with the subject: *laudatus sum*, “I, masculine, was or have been praised”; *laudata est*, “she was praised”; *laudati sunt*, “they, masculine or mixed, were praised”; and *laudata sunt*, “neuter things were praised”. Present forms of *sum* make the perfect passive, imperfect forms make the pluperfect passive, and future forms make the future perfect passive: *laudatus eram*, “I had been praised”; *laudatus ero*, “I shall have been praised”.

A personal agent normally takes *a/ab* plus ablative: *a Domino*, “by the Lord”. An impersonal means or instrument normally uses the ablative alone: *verbo sanatur*, “it is healed by a word”.

3.3 Deponents

Deponent verbs use passive morphology with active meaning. Their forms look passive, but their syntax and English meanings are active; they can, for example, govern the same kinds of objects as active verbs. Learn their principal parts in deponent form: *confiteor, confiteri, confessus sum*, “confess”; *sequor, sequi, secutus sum*, “follow”; *misereor, misereri, misertus sum*, “have mercy”. Thus *sequitur* means “he or she follows”, not “is followed”, and *confessus est* means “he confessed”, not “he was confessed”.

Worked example: *Ite, missa est*

Worked passage ID: W.I.41; exact source and collation state are recorded in the passage inventory.

ite is the irregular second-person plural imperative of *eo*, “go”. In this Late Latin formula, *missa* is a feminine singular noun meaning “dismissal”, serving as the subject or nominal assertion with *est*: “Go; it is the dismissal”. It is historically related to *mitto*, but a participial ellipsis should not be presented as the sole contextual parse.

Worked example: *Per quem omnia facta sunt*

Worked passage ID: W.I.42; exact source and collation state are recorded in the passage inventory.

omnia is neuter plural nominative. *facta sunt* is neuter plural perfect of *fio, fieri, factus sum*, “come to be, be made”, not a regular passive form of *facio*. Translation: “Through whom all things were made.”

Worked example: *Petite, et dabitur vobis* (Mt 7:7)

Worked passage ID: W.I.43; exact source and collation state are recorded in the passage inventory.

dabitur is third-person singular future passive indicative of *do*; its subject, “it”, is understood. *vobis* is dative plural recipient. Translation: “Ask, and it will be given to you.”

Worked example: *Confiteor Deo omnipotenti*

Worked passage ID: W.I.44; exact source and collation state are recorded in the passage inventory.

confiteor is first-person singular present deponent indicative and has active meaning. *Deo omnipotenti* is dative singular. Translation: “I confess to almighty God.”

Worked example: *Qui sequitur me, non ambulat in tenebris* (Jn 8:12)

Worked passage ID: W.I.45; exact source and collation state are recorded in the passage inventory.

sequitur is third-person singular present deponent; *me* is its object. *ambulat* is present active. Translation: “He who follows me does not walk in darkness.”

Worked example: *Misereatur vestri omnipotens Deus*

Worked passage ID: W.I.46; exact source and collation state are recorded in the passage inventory.

misereatur is third-person singular present deponent subjunctive, expressing a prayer; its meaning is active, “may he have mercy”. *vestri* is the genitive object found in this formula, and *omnipotens Deus* is the nominative subject. Translation: “May almighty God have mercy on you.”

3.4 Handwritten study and controlled composition

Copy the present passive table and change each form back to active without changing person or number. Write the imperfect and future passive of *laudo* and *rego*. Build a six-cell chart from masculine, feminine, and neuter subjects crossed with singular and plural perfect passive forms. For each deponent example, write “passive form, active meaning” in the margin. Compose “the word is heard”, *verbum auditur*; “the souls were guarded by the Lord”, *animæ a Domino custoditæ sunt*; and “we follow Christ”, *Christum sequimur*.

Advance when: Convert 18 of 20 active and passive forms without changing their person, number, tense, or mood; construct eight perfect passives with complete participle agreement; and classify 9 of 10 contextual passive-looking verbs correctly as true passive, deponent, or a form of *fio*.

Part III

Enrichment by Submodule

CHAPTER 4

Connections, transfer, and retrieval

4.1 Present-system passive forms — enrichment and transfer

Connection. A true passive changes the relation between grammatical subject and action without erasing person, number, tense, or mood.

Transfer task. Take three active forms from the lesson’s paradigm and convert them to passive while holding every other coordinate constant. For each resulting clause, mark grammatical subject and any expressed personal agent or means.

Retrieval check. State which coordinates stay fixed in an active-to-passive form conversion.

4.2 Perfect-system passives — enrichment and transfer

Connection. A perfect passive is a two-part agreement structure: participle plus finite *sum*.

Transfer task. Use the lesson model to build a grid varying subject gender and number while holding the tense constant, then vary the tense while holding one subject constant. Draw one agreement arrow and one tense arrow per form.

Retrieval check. Identify which component carries gender and which carries person and tense.

4.3 Deponents — enrichment and transfer

Connection. A deponent’s dictionary entry resolves the mismatch between passive morphology and active lexical meaning.

Transfer task. From the lesson’s deponent entries, make a card with present form, infinitive, perfect participial principal part, surface morphology, and active sense. Contrast one card with a true passive form of similar appearance.

Retrieval check. Explain why translating every *-tur* form as “is being” is unsafe.

4.4 Handwritten study and controlled composition — enrichment and transfer

Connection. A four-way tree makes the evidence order explicit before translation.

Transfer task. Classify the passive-looking forms in the lesson’s final review as true finite passive, deponent finite verb, participle within a verbal group, or form of *fio*. For each, cite morphology, dictionary identity, and syntactic attachment.

Retrieval check. Recite the decision order without giving an English translation.

Part IV

Selected Practice

CHAPTER 5

Unit 10: Passive Voice and Deponents

Worksheet I.37 — Variant A

Worksheet ID: I.37

Focus: Present-system passives, agency, and means**Use:** Keep grammatical subject distinct from personal agent.

1. Write all six present passive forms of *laudo* and *rego*.

-
2. Convert without changing person, number, tense, or mood: *laudat, regimus, audiebant, capietis*.

-
3. Give the present passive infinitives of *laudo*, *moneo*, *rego*, *cipio*, and *audio*; identify the special third-conjugation ending.

-
4. Translate *a Domino laudatur* and *verbo sanatur*; distinguish agent from means.

-
5. Correct *animæ custoditur a Domino* when plural souls are the subject.

-
6. **Text:** *Petite, et dabitur vobis*.

Passage ID: I.37.1; exact source and collation state are recorded in the passage inventory.

Parse both verbs, identify the subject of the passive and the recipient, then translate.

Worksheet I.40 — Variant D**Worksheet ID:** I.40**Focus:** True passives, deponents, participles, and *fio***Use:** Classify every passive-looking form before translating.

1. Classify and parse *laudatur, sequitur, facta sunt, benedictus est*, giving the contextual questions that remain.
-

2. Give 3 singular present, imperfect, future, perfect, and pluperfect passive of *audio*.
-

3. Convert *Deus laudat sanctos* to present passive and *Deus creavit mundum* to perfect passive.
-

4. Translate “we follow the Lord”, “the words will be heard”, and “the souls had been guarded”.
-

5. Diagnose *Omnia facti sunt per ipsum*.
-

6. **Text:** *Ite, missa est*.

Passage ID: I.40.1; exact source and collation state are recorded in the passage inventory.

Parse the imperative and nominal assertion, state the conventional force of the fixed formula, and translate.

Part VI

Answer Key

CHAPTER 7

How to Use the Keys

These keys diagnose grammatical decisions. Compare them only after completing the corresponding worksheet or assessment in ink. For a closed item, locate the form, function, government, or clause relation that decides the answer; a matching English paraphrase alone is not enough. For an open task, use the stated model and rubric to test morphology, syntax, idiom, and source control.

Some translations legitimately admit more than one English wording. An alternative is acceptable when it preserves the Latin agency, negation, time, dependency, and material ambiguity. Record a defensible alternative in the error ledger rather than changing it merely to imitate the model's style.

CHAPTER 8

Enrichment models and rubrics

Present-system passive forms — model and rubric

Connection. A true passive changes the relation between grammatical subject and action without erasing person, number, tense, or mood.

Model / acceptable evidence. Person, number, tense, and mood remain fixed; voice changes. The former object may become grammatical subject in a clause transformation, while a personal agent is expressed with *a/ab* plus ablative and means ordinarily with the bare ablative.

Perfect-system passives — model and rubric

Connection. A perfect passive is a two-part agreement structure: participle plus finite *sum*.

Model / acceptable evidence. The perfect passive participle agrees with the subject in gender and number; the finite form of *sum* carries person, number, tense contribution, and mood. Both components are required for the complete finite group.

Deponents — model and rubric

Connection. A deponent's dictionary entry resolves the mismatch between passive morphology and active lexical meaning.

Model / acceptable evidence. Each deponent card must preserve passive-form principal parts while assigning the active lexical sense shown in the lesson. The retrieval answer must require dictionary identity and context because *-tur* can occur in true passives and deponents.

Handwritten study and controlled composition — model and rubric

Connection. A four-way tree makes the evidence order explicit before translation.

Model / acceptable evidence. A complete tree first identifies whether the form is finite or participial, then checks its dictionary entry, verbal companions, subject agreement, and clause role. *fio* retains its own lexical identity. Translation follows classification rather than deciding it.

CHAPTER 9

Unit 10: Passive Voice and Deponents

Solution I.37 — Variant A

Worksheet ID: I.37

Focus: Present-system passives, agency, and means

Use: Keep grammatical subject distinct from personal agent.

- Write all six present passive forms of *laudo* and *rego*.
Answer / model: *laudor, laudaris, laudatur, laudamur, laudamini, laudantur; regor, regeris, regitur, regimur, regimini, reguntur*.
- Convert without changing person, number, tense, or mood: *laudat, regimus, audiebant, capietis*.
Answer / model: *laudatur, regimur, audiebantur, capiimini*.
- Give the present passive infinitives of *laudo*, *moneo*, *rego*, *capio*, and *audio*; identify the special third-conjugation ending.
Answer / model: *laudari, moneri, regi, capi, audiri*. Third and third-*io* use *-i*, not *-eri*.
- Translate *a Domino laudatur* and *verbo sanatur*; distinguish agent from means.
Answer / model: “He/she is praised by the Lord”: personal agent takes *a* plus ablative. “He/she is healed by a word”: impersonal means uses ablative alone.
- Correct *animæ custoditur a Domino* when plural souls are the subject.
Answer / model: *Animæ custodiuntur a Domino*. Plural nominative subject requires 3 plural passive *custodiuntur*.
- Text:** *Petite, et dabitur vobis*.
Passage ID: I.37.1; exact source and collation state are recorded in the passage inventory.
Parse both verbs, identify the subject of the passive and the recipient, then translate.
Answer / notes: *petite*: 2 plural present active imperative; *dabitur*: 3 singular future passive indicative, with understood neuter subject “it”; *vobis*: dative plural recipient. “Ask, and it will be given to you.”

Solution I.40 — Variant D

Worksheet ID: I.40

Focus: True passives, deponents, participles, and *fio*

Use: Classify every passive-looking form before translating.

- Classify and parse *laudatur*, *sequitur*, *facta sunt*, *benedictus est*, giving the contextual questions that remain.
Answer / model: *laudatur*: 3 singular present true passive, “is praised”. *sequitur*: 3 singular present deponent, “follows”. *facta sunt*: neuter plural perfect of *fio*, “were made/came to be”. *benedictus est*: masculine singular perfect passive, “was/has been blessed”, or adjective plus *est*, “is blessed”, as context decides.
- Give 3 singular present, imperfect, future, perfect, and pluperfect passive of *audio*.
Answer / model: *auditur*, *audiebatur*, *audietur*, *auditus/audita/auditum est*, *auditus/audita/auditum erat*; participle gender follows the subject.
- Convert *Deus laudat sanctos* to present passive and *Deus creavit mundum* to perfect passive.
Answer / model: *Sancti a Deo laudantur*; *Mundus a Deo creatus est*.
- Translate “we follow the Lord”, “the words will be heard”, and “the souls had been guarded”.
Answer / model: *Dominum sequimur*; *verba audientur*; *animæ custoditæ erant*.
- Diagnose *Omnia facti sunt per ipsum*.
Answer / model: *Omnia facta sunt per ipsum*. Neuter plural subject *omnia* requires neuter plural *facta*.
- Text:** *Ite, missa est*.
Passage ID: I.40.1; exact source and collation state are recorded in the passage inventory.
 Parse the imperative and nominal assertion, state the conventional force of the fixed formula, and translate.
Answer / notes: *ite*: irregular 2 plural present active imperative of *eo*, “go”. In this Late Latin formula, *missa* is a feminine singular noun meaning “dismissal”, serving as subject or nominal assertion with *est*: “Go; it is the dismissal”. It is historically related to *mitto*, but a participial ellipsis is not the sole contextual parse.

Part VII

Scope and Sources

CHAPTER 10

Scope and Qualifications

10.1 Packet boundary

This is module EL-I.10, *Passive Voice and Deponent Verbs*, in Triptych's print-first Ecclesiastical Latin curriculum. It imports one authoritative teaching unit, its local reference decisions, enrichment for each internal submodule, the selected worksheets named in the module plan, and the matching solutions. This packet teaches the ordinary classification tree; dictionary identity controls whether a verb is deponent, and *fio* is not reduced to a regular passive of *facio*.

The unprinted worksheet variants remain course-owned extension material; their omission is intentional and is not a claim that the module exhausts available practice. Two focused sessions describe the packet's planned core, while the mastery gate and delayed recall determine advancement.

10.2 Corpus, text, and limits

The controlling reader is the 1962 typical edition of the *Missale Romanum*; the identified Clementine Vulgate and other ecclesiastical prose are supporting corpora. Running Latin normally uses consonantal *i*, the ligature *æ*, and no macrons. Received excerpts may normalize typography but are not diplomatic transcriptions unless labeled. Uncited short drills, transformations, and instructional models are project-composed; English translations and glosses are project translations unless identified otherwise.

This packet teaches language competence. It is not an official liturgical book, approved seminary curriculum, certification, pronunciation or ceremonial course, critical edition, or authority for a liturgical, theological, textual, or canonical judgment. Check received wording against the editions identified in the course-wide passage inventory.

10.3 Review, rights, and release state

Course-wide research records own the edition, passage, answer, curriculum, and source decisions; the leaf's module map records this packet's selection and enrichment. No independent Latinist, liturgist, pedagogue, theologian, or ecclesiastical reviewer is claimed. Page-image collation and the donor and liturgical-text distribution bases remain unresolved pre-installation gates. The packet therefore remains a working build on hold, not an installed or released publication.

CHAPTER 11

References

The following works are the course’s controlling corpus and reference aids. Project-composed explanation, translation, analysis, exercises, and models are distinguished from received wording under the convention stated in the Scope and Qualifications appendix. Short source passages are identified so that the learner can verify their wider context. The adjacent edition manifest and passage inventory record exact source roles, checks, access states, and known rights limits.

11.1 Primary corpus

- Catholic Church, *Missale Romanum ex decreto SS. Concilii Tridentini restitutum, Summorum Pontificum cura recognitum*, editio typica (Rome, 1962). A searchable presentation of the edition is hosted by the Holy See’s Biblia Clerus project: <https://www.clerus.org/bibliaclerusonline/EN/gmb.htm>.
- A page-image scan of the 1962 typical edition is available through the Church Music Association of America: <https://media.churchmusicassociation.org/pdf/missale62.pdf>. Page images, rather than unsourced transcriptions, should decide doubtful punctuation or spelling.
- The Clementine Vulgate is the principal biblical comparison corpus. The public-domain 1914 edition edited by Michael Hetzenauer and its provenance are described at <https://www.sacredbible.org/vulgate1914/>.

11.2 Grammar and lexicography

- J. H. Allen and J. B. Greenough, *New Latin Grammar for Schools and Colleges* (1903), a donor-declared public-domain reference whose digital locator was not independently consulted during integration: <https://archive.org/details/allengreenoughsn01alle>.
- Charles E. Bennett, *New Latin Grammar*, 1918 revision, Project Gutenberg eBook 15665; public-domain text in the United States: <https://www.gutenberg.org/ebooks/15665>.
- Charlton T. Lewis and Charles Short, *A Latin Dictionary* (1879), searchable transcription: <https://logeion.uchicago.edu/lexidium>.
- Charles du Fresne, sieur du Cange, *Glossarium mediae et infimae latinitatis*, a donor-declared later-vocabulary aid whose digital locator was not independently consulted during integration: <http://ducange.enc.sorbonne.fr/>.

The underlying 1903, 1918, 1879, and 1883–1887 printed works are public domain in the United States. Digital transcriptions and interfaces retain their own terms and are cited as access tools, not relicensed or reproduced wholesale. The 1962 Missal, Scripture, official text, and other received wording retain their own status; see the scope appendix, research records, and final-page rights notice.

Classical reference grammars describe the inherited system but do not by themselves explain every biblical or ecclesiastical development. The advanced volume therefore distinguishes classical baseline, Vulgate usage, later Christian usage, and stable liturgical formula instead of labeling every difference an “exception.”

11.3 Citation convention

Missal passages are cited by liturgical location and text genre rather than by a page number that varies among printings. Biblical texts are cited by book, chapter, and verse. Historical authors are cited by work and section wherever possible. A learner preparing a formal commentary should verify each passage against the edition actually being used and record any variant. These references are not a claim that every

historical-linguistic question can be settled by the listed school grammars and dictionary interfaces.
