

Ecclesiastical Latin

EL-II.9: Conditions

Classify and transform open, future, and contrary-to-fact conditions while preserving time, stance, and independent verb parses

A self-contained learning packet with a local reference card, enriched submodules, selected handwritten practice, a mastery record, and matching answers. This working study is not an official liturgical book or approved curriculum.

Corpus	1962 <i>Missale Romanum</i> ; Vulgate and ecclesiastical prose as supporting readers
Method	Print, annotate, parse, copy, transform, translate, and compose by hand
Pacing	Advance by demonstrated mastery; module packets use two focused sessions as a planning envelope
Document	Learning module; learner and terminal-key edition
Triptych: AI Driven Studies in Catholic Faith, Worship, and Law

Part I

Module Plan and Reference

CHAPTER 1

Plan, prerequisites, and advancement decision

Module ID	EL-II.9
Course stage	Stage II — Core Grammar
Prerequisites	EL-II.8 mastery: choose conjunction-clause mood from viewpoint and relation
Observable outcome	Classify and transform open, future, and contrary-to-fact conditions while preserving time, stance, and independent verb parses
Printed practice	Worksheets II.33 (guided Variant A) and II.36 (independent Variant D), with terminal keys
Extension bank	Worksheets II.34 and II.35 remain optional remediation or delayed-recall variants
Next dependency	EL-II.10, Relative Clauses of Characteristic

1.1 Two focused sessions

Session 1 — guided acquisition. Build the condition timeline/stance chart and parse protasis and apodosis independently, then complete Worksheet II.33 as the guided application.

Session 2 — transfer and gate. Transform one lexical pair through the lesson's condition patterns, preserve reality and time in English, and complete Worksheet II.36 independently.

The two-session plan is a workload envelope, not permission to advance by elapsed time. Stop, correct in a different color, and use an omitted variant when the mastery evidence below is absent.

Advance when: Classify ten unseen conditions and parse every verb with no more than one error, transform one lexical pair through all five taught patterns without the table, and translate two contrary-to-fact conditions with correct English time.

CHAPTER 2

Module reference card

2.1 Terms, forms, and decisions to retrieve

- protasis and apodosis as independently parsed clauses;
- open, future more vivid, future less vivid, present contrary-to-fact, and past contrary-to-fact patterns;
- *si*, *nisi*, *sin*, and conditional relatives; and
- English renderings that preserve possibility, expectation, or unreality and time.

2.2 High-risk contrast

Tense and mood must be parsed independently in both clauses before the condition is classified. Subjunctive does not by itself mean past, and indicative does not by itself promise fulfillment.

2.3 Working protocol

Before looking anything up, mark the finite verb or verbal center, propose dictionary forms, and record at least two formally possible readings where an ending is syncretic. Use the identified 1962 Missal and the course source record for received wording. A familiar English rendering does not replace a parse.

Part II

Core Lesson

CHAPTER 3

Conditions

On completing this unit, you can:

- classify open, future, and contrary-to-fact conditions;
- choose tense and mood independently in protasis and apodosis;
- recognize *nisi*, *sin*, and conditional relative words;
- translate conditions without turning possibility into fact or unreality into doubt.

3.1 The conditional system

Protasis and apodosis

The **protasis** is the condition, normally introduced by *si* or *nisi*; the **apodosis** is its consequence.

Type	Protasis	Apodosis	Normal sense
open, present/past	indicative	any appropriate indicative/imperative	leaves truth open: “if it is/was”
future more vivid	future or future perfect indicative	future indicative or imperative	expected possibility: “if it happens”
future less vivid	present subjunctive	present subjunctive	tentative possibility: “if it should happen, it would”
present contrary to fact	imperfect subjunctive	imperfect subjunctive	“if it were (but is not), it would”
past contrary to fact	pluperfect subjunctive	pluperfect subjunctive	“if it had (but did not), it would have”

Mixed conditions use the tense appropriate to each time sphere. An imperative, jussive, or question may stand in the apodosis. *Nisi* is “unless/if not”; *si non* usually negates a particular word; *sin* means “but if.” *Quicumque* and *si quis* can generalize a condition.

Do not diagnose by one form

The ending *-erit* may be future perfect indicative or perfect subjunctive. In a vivid future protasis paired with a future apodosis it is normally future perfect: *si venerit, gaudebimus*. Imperfect and pluperfect subjunctives do not always signal a condition; conjunction and clause relation must also be present.

3.2 Reading the forms in context

Worked example: vivid future (Psalm 129:3)

Worked passage ID: W.II.35; exact source and collation state are recorded in the passage inventory.

Si iniquitates observaveris, Domine, Domine, quis sustinebit?

Analysis. In this future frame, *observaveris* is second-person singular future perfect indicative, prior to future *sustinebit*. The rhetorical question forms the apodosis.

Translation. “If you keep watch over iniquities, O Lord, O Lord, who will endure?”

Worked example: open condition with jussive consequence (Matthew 16:24)

Worked passage ID: W.II.36; exact source and collation state are recorded in the passage inventory.

Si quis vult post me venire, abneget semetipsum, et tollat crucem suam, et sequatur me.

Analysis. Present indicative *vult* leaves the condition open. Three present subjunctives—*abneget*, *tollat*, *sequatur*—are jussive apodoses, not a future-less-vivid pair.

Translation. “If anyone wishes to come after me, let him deny himself, take up his cross, and follow me.”

Worked example: future condition (John 6:54)

Worked passage ID: W.II.37; exact source and collation state are recorded in the passage inventory.

Nisi manducaveritis carnem Filii hominis et biberitis eius sanguinem, non habebitis vitam in vobis.

Analysis. *Manducaveritis* and *biberitis* are future perfect indicatives in the protasis; *habebitis* is future indicative. *Nisi* negates the condition as a whole.

Translation. “Unless you eat the flesh of the Son of Man and drink his blood, you will not have life in you.”

Worked example: past contrary to fact (1 Corinthians 2:8)

Worked passage ID: W.II.38; exact source and collation state are recorded in the passage inventory.

Si enim cognovissent, numquam Dominum gloriae crucifixissent.

Analysis. Both *cognovissent* and *crucifixissent* are pluperfect subjunctive. The construction denies the past premise and consequence.

Translation. “For if they had known, they would never have crucified the Lord of glory.”

Worked example: a personal past contrary condition (John 11:21)

Worked passage ID: W.II.39; exact source and collation state are recorded in the passage inventory.

Domine, si fuisses hic, frater meus non fuisset mortuus.

Analysis. Pluperfect subjunctives *fuisses* and *fuisset* place both unfulfilled facts in the past. *Mortuus* is a perfect participle agreeing with *frater*.

Translation. “Lord, if you had been here, my brother would not have died.”

3.3 Writing laboratory

Copy the five-row conditional table. For each row write one paired verb form of *venio* and *gaudeo*. Mark indicative forms with a straight underline and subjunctives with a wavy underline.

Transform *si venit, gaudemus* successively into future more vivid, future less vivid, present contrary, and past contrary. Then compose a condition whose apodosis is an imperative and one introduced by *nisi*. Translate each so its degree of reality is audible.

Advance when: you classify ten unseen conditions and parse every verb with no more than one error, transform one lexical pair through all five patterns without consulting the table, and translate two contrary-to-fact conditions with the correct English time.

Part III

Enrichment by Submodule

CHAPTER 4

Connections, transfer, and retrieval

4.1 The conditional system — enrichment and transfer

Connection. A timeline/stance chart keeps chronological location separate from the speaker's presentation of likelihood or unreality.

Transfer task. For each taught condition type, enter protasis mood/tense, apodosis mood/tense, time reference, and stance in separate columns. Add no English until the Latin columns are complete.

Retrieval check. Name the two contrary-to-fact time frames and their ordinary subjunctive tenses.

4.2 Reading the forms in context — enrichment and transfer

Connection. Protasis and apodosis can contain different forms, so each clause must be parsed before the pair receives a label.

Transfer task. Take the lesson's unseen contrasts and write a full parse under every finite verb. Only then classify the condition and underline the feature that distinguishes it from its nearest neighbor.

Retrieval check. Explain why an English "would" cannot replace the Latin parse.

4.3 Writing laboratory — enrichment and transfer

Connection. Holding vocabulary constant while changing the condition tests the grammar of stance rather than lexical recognition.

Transfer task. Perform the lesson's five-pattern transformation. Plot each pair on the timeline/stance chart and give a close English rendering that makes the intended time and reality status audible.

Retrieval check. State which parts of the proposition remain fixed across all five versions.

Part IV

Selected Practice

CHAPTER 5

Conditions: parallel forms

Worksheet II.33 — Conditions A

Worksheet ID: II.33

Focus: open, future, less vivid, contrary-to-fact

Use: Label protasis and apodosis; parse every verb.

1. Classify *Si quis vult venire, veniat*.

-
2. Make future more vivid: *si venit, gaudemus*.

-
3. Make future less vivid.

-
4. Make present contrary to fact.

-
5. Text: *Si enim cognovissent, numquam Dominum gloriæ crucifixissent*.

Passage ID: II.33.1; exact source and collation state are recorded in the passage inventory.

Classify and translate.

-
6. Write a past contrary condition with *audire* and *credere*.
-

Worksheet II.36 — Conditions D**Worksheet ID:** II.36**Focus:** open, future, less vivid, contrary-to-fact**Use:** Label protasis and apodosis; parse every verb.

1. Distinguish *si venerit, gaudebit* and *si veniat, gaudeat*.
-

2. Supply *sin*: “If he comes, rejoice; but if he remains, wait.”
-

3. Change *Si diligitis me, mandata mea servate* to future more vivid.
-

4. Explain why *pateretur* alone does not prove a contrary condition.
-

5. **Text:** *Si iniquitates observaveris, Domine, Domine, quis sustinebit?*

Passage ID: II.36.1; exact source and collation state are recorded in the passage inventory.

Mark protasis and apodosis; translate.

6. Write one condition of each reality level using *orare* and *audire*.
-

Part V**Mastery Decision****CHAPTER 6**

Part VI

Answer Key

CHAPTER 7

How to Use the Keys

These keys diagnose grammatical decisions. Compare them only after completing the corresponding worksheet or assessment in ink. For a closed item, locate the form, function, government, or clause relation that decides the answer; a matching English paraphrase alone is not enough. For an open task, use the stated model and rubric to test morphology, syntax, idiom, and source control.

Some translations legitimately admit more than one English wording. An alternative is acceptable when it preserves the Latin agency, negation, time, dependency, and material ambiguity. Record a defensible alternative in the error ledger rather than changing it merely to imitate the model's style.

CHAPTER 8

Enrichment models and rubrics

The conditional system — model and rubric

Connection. A timeline/stance chart keeps chronological location separate from the speaker's presentation of likelihood or unreality.

Model / acceptable evidence. Present contrary-to-fact ordinarily uses imperfect subjunctive; past contrary-to-fact uses pluperfect subjunctive. The complete chart must also preserve the indicative and future patterns taught rather than treating every condition as subjunctive.

Reading the forms in context — model and rubric

Connection. Protasis and apodosis can contain different forms, so each clause must be parsed before the pair receives a label.

Model / acceptable evidence. The classification must follow actual tense and mood in both clauses and the time relation. English auxiliaries are translation choices and can blur distinctions; they do not establish the Latin morphology.

Writing laboratory — model and rubric

Connection. Holding vocabulary constant while changing the condition tests the grammar of stance rather than lexical recognition.

Model / acceptable evidence. The lexical proposition and logical if-then relation remain fixed; verb forms, time framing, and speaker stance change according to the selected pattern. Each rendering must preserve those changes without inventing certainty.

CHAPTER 9

Conditions: parallel forms

Solution II.33 — Conditions A

Worksheet ID: II.33

Focus: open, future, less vivid, contrary-to-fact

Use: Label protasis and apodosis; parse every verb.

1. Classify *Si quis vult venire, veniat*.

Answer / model: Open present condition: indicative *vult*; jussive subjunctive *veniat* is the apodosis.

2. Make future more vivid: *si venit, gaudemus*.

Answer / model: *Si venerit, gaudebimus*. *Venerit* is future perfect indicative here; *gaudebimus* future.

3. Make future less vivid.

Answer / model: *Si veniat, gaudeamus*: “If he should come, we would rejoice.” Both are present subjunctive.

4. Make present contrary to fact.

Answer / model: *Si veniret, gauderemus*: “If he were coming, we would rejoice.”

5. Text: *Si enim cognovissent, numquam Dominum gloriæ crucifixissent*.

Passage ID: II.33.1; exact source and collation state are recorded in the passage inventory.

Classify and translate.

Answer / notes: Past contrary to fact; both verbs are third plural pluperfect subjunctive. “For if they had known, they would never have crucified the Lord of glory.”

6. Write a past contrary condition with *audire* and *credere*.

Answer / model: *Si audivissent, credidissent*: “If they had heard, they would have believed.”

Solution II.36 — Conditions D**Worksheet ID:** II.36**Focus:** open, future, less vivid, contrary-to-fact**Use:** Label protasis and apodosis; parse every verb.

1. Distinguish *si venerit, gaudebit* and *si veniat, gaudeat*.

Answer / model: First is future more vivid: future perfect indicative + future indicative. Second is future less vivid or a jussive combination: present subjunctives; context decides.

2. Supply *sin*: “If he comes, rejoice; but if he remains, wait.”

Answer / model: *Si venit, gaude; sin manet, exspecta.*

3. Change *Si diligitis me, mandata mea servate* to future more vivid.

Answer / model: *Si me dilexeritis, mandata mea servabitis.*

4. Explain why *pateretur* alone does not prove a contrary condition.

Answer / model: It is an imperfect subjunctive form, but without conditional syntax it may belong to time, purpose, command, and other uses. Form and clause relation must both be identified.

5. **Text:** *Si iniquitates observaveris, Domine, Domine, quis sustinebit?*

Passage ID: II.36.1; exact source and collation state are recorded in the passage inventory.

Mark protasis and apodosis; translate.

Answer / notes: Protasis *si iniquitates observaveris*; interrogative apodosis *quis sustinebit?*. “If you keep watch over iniquities, O Lord, O Lord, who will endure?”

6. Write one condition of each reality level using *orare* and *audire*.

Answer / model: Models: *si oras, audit; si oraveris, audiet; si ores, audiat; si orares, audiret; si oravisses, audivisset.*

Part VII

Scope and Sources

CHAPTER 10

Scope and Qualifications

10.1 Packet boundary

This is module EL-II.9, *Conditions*, in Triptych's print-first Ecclesiastical Latin curriculum. It imports one authoritative teaching unit, its local reference decisions, enrichment for each internal submodule, the selected worksheets named in the module plan, and the matching solutions. This packet teaches the five operational patterns in the course; mixed conditions require their actual clause forms and context rather than forced normalization.

The unprinted worksheet variants remain course-owned extension material; their omission is intentional and is not a claim that the module exhausts available practice. Two focused sessions describe the packet's planned core, while the mastery gate and delayed recall determine advancement.

10.2 Corpus, text, and limits

The controlling reader is the 1962 typical edition of the *Missale Romanum*; the identified Clementine Vulgate and other ecclesiastical prose are supporting corpora. Running Latin normally uses consonantal *i*, the ligature *æ*, and no macrons. Received excerpts may normalize typography but are not diplomatic transcriptions unless labeled. Uncited short drills, transformations, and instructional models are project-composed; English translations and glosses are project translations unless identified otherwise.

This packet teaches language competence. It is not an official liturgical book, approved seminary curriculum, certification, pronunciation or ceremonial course, critical edition, or authority for a liturgical, theological, textual, or canonical judgment. Check received wording against the editions identified in the course-wide passage inventory.

10.3 Review, rights, and release state

Course-wide research records own the edition, passage, answer, curriculum, and source decisions; the leaf's module map records this packet's selection and enrichment. No independent Latinist, liturgist, pedagogue, theologian, or ecclesiastical reviewer is claimed. Page-image collation and the donor and liturgical-text distribution bases remain unresolved pre-installation gates. The packet therefore remains a working build on hold, not an installed or released publication.

CHAPTER 11

References

The following works are the course’s controlling corpus and reference aids. Project-composed explanation, translation, analysis, exercises, and models are distinguished from received wording under the convention stated in the Scope and Qualifications appendix. Short source passages are identified so that the learner can verify their wider context. The adjacent edition manifest and passage inventory record exact source roles, checks, access states, and known rights limits.

11.1 Primary corpus

- Catholic Church, *Missale Romanum ex decreto SS. Concilii Tridentini restitutum, Summorum Pontificum cura recognitum*, editio typica (Rome, 1962). A searchable presentation of the edition is hosted by the Holy See’s Biblia Clerus project: <https://www.clerus.org/bibliaclerusonline/EN/gmb.htm>.
- A page-image scan of the 1962 typical edition is available through the Church Music Association of America: <https://media.churchmusicassociation.org/pdf/missale62.pdf>. Page images, rather than unsourced transcriptions, should decide doubtful punctuation or spelling.
- The Clementine Vulgate is the principal biblical comparison corpus. The public-domain 1914 edition edited by Michael Hetzenauer and its provenance are described at <https://www.sacredbible.org/vulgate1914/>.

11.2 Grammar and lexicography

- J. H. Allen and J. B. Greenough, *New Latin Grammar for Schools and Colleges* (1903), a donor-declared public-domain reference whose digital locator was not independently consulted during integration: <https://archive.org/details/allengreenoughsn01alle>.
- Charles E. Bennett, *New Latin Grammar*, 1918 revision, Project Gutenberg eBook 15665; public-domain text in the United States: <https://www.gutenberg.org/ebooks/15665>.
- Charlton T. Lewis and Charles Short, *A Latin Dictionary* (1879), searchable transcription: <https://logeion.uchicago.edu/lexidium>.
- Charles du Fresne, sieur du Cange, *Glossarium mediae et infimae latinitatis*, a donor-declared later-vocabulary aid whose digital locator was not independently consulted during integration: <http://ducange.enc.sorbonne.fr/>.

The underlying 1903, 1918, 1879, and 1883–1887 printed works are public domain in the United States. Digital transcriptions and interfaces retain their own terms and are cited as access tools, not relicensed or reproduced wholesale. The 1962 Missal, Scripture, official text, and other received wording retain their own status; see the scope appendix, research records, and final-page rights notice.

Classical reference grammars describe the inherited system but do not by themselves explain every biblical or ecclesiastical development. The advanced volume therefore distinguishes classical baseline, Vulgate usage, later Christian usage, and stable liturgical formula instead of labeling every difference an “exception.”

11.3 Citation convention

Missal passages are cited by liturgical location and text genre rather than by a page number that varies among printings. Biblical texts are cited by book, chapter, and verse. Historical authors are cited by work and section wherever possible. A learner preparing a formal commentary should verify each passage against the edition actually being used and record any variant. These references are not a claim that every

historical-linguistic question can be settled by the listed school grammars and dictionary interfaces.
