

Ecclesiastical Latin

EL-III.12: Full-Mass Capstone

Sustain the independent-reader protocol across one complete formulary and prepare a separately delayed transfer to a different category

A self-contained learning packet with a local reference card, enriched submodules, selected handwritten practice, a mastery record, and matching answers. This working study is not an official liturgical book or approved curriculum.

Corpus	1962 <i>Missale Romanum</i> ; Vulgate and ecclesiastical prose as supporting readers
Method	Print, annotate, parse, copy, transform, translate, and compose by hand
Pacing	Advance by demonstrated mastery; module packets use two focused sessions as a planning envelope
Document	Learning module; learner and terminal-key edition
Triptych: AI Driven Studies in Catholic Faith, Worship, and Law

Part I

Module Plan and Reference

CHAPTER 1

Plan, prerequisites, and advancement decision

Module ID	EL-III.12
Course stage	Stage III — Independent Missal Reading
Prerequisites	EL-III.11 and mastery evidence from every preceding Stage III genre module
Observable outcome	Sustain the independent-reader protocol across one complete formulary and prepare a separately delayed transfer to a different category
Printed practice	Worksheet III.45 (temporal capstone, Variant A) as the two-session core; Worksheet III.47 (Common capstone, Variant C) as a detachable delayed transfer
Extension bank	Worksheets III.46 and III.48 remain optional second-temporal and Requiem capstones
Next dependency	EL-GATE-III, Missal Reading Assessment Sequence (M-A/M-B diagnostics and M-C blind transfer); after passage, EL-A1, Register across Time

1.1 Two focused sessions

Session 1 — guided acquisition. Inventory the assigned temporal formulary and complete its no-lookup cold read and clause maps in Worksheet III.45.

Session 2 — transfer and gate. Finish direct summaries, comprehension, form sample, lookup audit, and domain scoring for Worksheet III.45.

The two-session plan is a workload envelope, not permission to advance by elapsed time. Stop, correct in a different color, and use an omitted variant when the mastery evidence below is absent.

Advance when: Pass every stated domain on the complete temporal formulary, then after a genuine delay repeat the protocol on an assessor-selected Common without reusing a teaching formulary; do not average a failed domain into a passing total.

Required delay. Worksheet III.47 is printed for later transfer, not as extra work in the same two-session sitting. The course exit still requires the separately administered EL-GATE-III sequence, whose M-C form uses two genuinely unfamiliar Masses; this packet alone cannot certify that outcome.

CHAPTER 2

Module reference card

2.1 Terms, forms, and decisions to retrieve

- formulary inventory before reading and genre-by-genre clause mapping;
- no-lookup cold read followed by recorded lemma hypotheses;
- morphology, clause attachment, reference/ellipsis, comprehension, and lookup domains; and
- a delayed second category that tests transfer rather than memorized repetition.

2.2 High-risk contrast

Completing one known capstone demonstrates sustained practice. Only later blind work on genuinely unfamiliar formularies tests transfer; elapsed time and an averaged score cannot replace that evidence.

2.3 Working protocol

Before looking anything up, mark the finite verb or verbal center, propose dictionary forms, and record at least two formally possible readings where an ending is syncretic. Use the identified 1962 Missal and the course source record for received wording. A familiar English rendering does not replace a parse.

Part II

Core Lesson

CHAPTER 3

Full-Mass Unseen Capstones

On completing this unit, you can:

- execute a complete formulary reading without leaning on remembered English;
- keep a disciplined lookup and error ledger;
- demonstrate direct comprehension through Latin answers and grammatical evidence;
- decide honestly whether to advance, remediate a genre, or repeat a gate.

The capstone is not a race and not a performance of vague spiritual familiarity. It is an audit trail. Use a clean copy of the *Missale Romanum* (1962), blank paper, a Latin dictionary, and no parallel translation. A grammar may be consulted only after the timed first pass and must be logged like a dictionary lookup.

A **capstone** is an integrative assessment requiring earlier skills to operate together on a substantial new task. An **audit trail** is the written record that makes the process checkable: marks, proposed parses, lookups, revisions, and classified errors. **Direct comprehension** means that the learner can follow agents, actions, relations, and discourse movement from the Latin itself. A **literal sense** is a restrained account that preserves those grammatical relations; it need not mimic Latin word order or replace each Latin word mechanically with one English word.

3.1 The complete-Mass protocol

1. **Inventory, 5 minutes.** List the formulary and every genre it contains. Identify directions to a Common or another Mass.
2. **Cold read.** Read all Proper texts once without a lookup. Mark finite verbs, clause boundaries, speakers, and only the most likely heads.
3. **Analytical read.** Complete dependencies, prose-order lines for compressed passages, and the ellipsis ledger. Add the fixed Ordo and Canon by random-entry prompts rather than reciting from the beginning.
4. **Controlled lookup.** Look up only marked content words after proposing lemma, morphology, and function. Record every lookup.
5. **Direct-comprehension proof.** Answer twelve questions in simple Latin: agents, actions, recipients, causes, purposes, contrasts, and temporal sequence. Then give a restrained literal written sense.
6. **Audit.** Check against the analytical key or a competent reader. Classify every error as form, construction, vocabulary, reference, ellipsis, or unsupported inference.

For that classification, a **form error** misidentifies or produces morphology; a **construction error** misstates a syntactic dependency; a **vocabulary error** selects the wrong contextual sense; a **reference error** assigns a pronoun or modifier to the wrong referent; an **ellipsis error** supplies or omits wording without grammatical warrant; and an **unsupported inference** asserts more than the textual evidence permits.

3.2 Dictionary thresholds

The target is not zero dictionary use. Mature readers use dictionaries to distinguish senses. The target is no dictionary dependence for grammatical structure. On a first capstone, permit ten new content-word lookups per five hundred words. On the second, eight; on the final two, five. A repeated lookup of a word

already in the ledger counts twice. Proper names do not count, but failing to identify their case does.

3.3 Assigned capstones

Use texts not excerpted in this volume:

1. **Capstone A—Temporal prose:** Dominica XII post Pentecosten. Emphasize the Collect, 2 Cor. 3:4–9, and Lc. 10:23–37.
2. **Capstone B—Temporal contrast:** Dominica XXIII post Pentecosten. Read all chants and prayers as well as Phil. 3:17–21; 4:1–3 and Mt. 9:18–26.
3. **Capstone C—Common and supplied name:** a locally available feast using the Commune unius Martyris non Pontificis. Record every supplied element and agreement change.
4. **Capstone D—Requiem:** Missa quotidiana Defunctorum, adapting the prayers to a plural intention supplied by the assessor.

These assignments test breadth but not every page of the Missal. Long-term independence grows by sampling the complete annual cycle: after each review cycle, choose another previously unread Sunday or feast formulary and follow it with an error-ledger review. Pace that work by mastery rather than by weeks. Familiar Ordinaries and Commons must not be allowed to inflate the unseen score.

3.4 Measurable final gate

Score each capstone in five equal domains:

Domain	Passing evidence
Morphology	At least 90% correct on forty randomly sampled forms.
Clause structure	At least 90% of finite clauses correctly bounded and attached.
Reference/ellipsis	At least 90% of sampled pronouns, participles, and supplies justified.
Direct comprehension	At least 10 of 12 Latin questions substantively correct; literal sense preserves agent, action, negation, and purpose.
Dictionary discipline	Lookup ceiling observed; every lookup begins with a proposed lemma and function.

Passing requires every domain at threshold on two consecutive unseen capstones. An average cannot conceal a failed syntax or comprehension domain. If a domain fails, return to the matching genre chapter, complete two unused worksheet variants, and attempt a different unseen formulary.

Advance when: you pass two consecutive full-Mass unseen capstones in every domain, then read a third complete formulary at normal silent reading pace with no facing translation and no more than five content-word lookups per five hundred words. You can also write a 120-word controlled Latin summary whose agents, tenses, agreements, and subordinate relations contain no more than five substantive errors after one self-correction pass.

Part III

Enrichment by Submodule

CHAPTER 4

Connections, transfer, and retrieval

4.1 The complete-Mass protocol — enrichment and transfer

Connection. A complete read is a sequence of auditable decisions, not a long translation assignment.

Transfer task. Before Worksheet III.45, make a one-page process record with genre inventory, cold-map checkpoint, lookup release, direct-summary checkpoint, and final audit.

Retrieval check. State the evidence required before the lookup checkpoint opens.

4.2 Dictionary thresholds — enrichment and transfer

Connection. A lookup ceiling measures morphological independence only when repeated and false lookups remain visible.

Transfer task. For ten sample entries from the completed capstone, mark known, inferred, justified new lookup, avoidable lookup, or repeated ledger failure.

Retrieval check. Compute the content-word rate using the packet's stated denominator.

4.3 Assigned capstones — enrichment and transfer

Connection. A second formulary tests transfer only when category, heading, and prior exposure are documented.

Transfer task. Complete the assignment block for temporal Worksheet III.45 now and for Common Worksheet III.47 only after delay: exact heading, category, source trail, prior exposure, and assessor choice.

Retrieval check. Give one reason a familiar teaching Mass cannot serve as blind transfer.

4.4 Measurable final gate — enrichment and transfer

Connection. Each domain protects a different failure mode, so strength in translation cannot erase weak morphology or reference.

Transfer task. Score the completed temporal work in five rows and prescribe one exact remediation action for every row below threshold.

Retrieval check. Explain why averaging the rows is prohibited.

Part IV

Selected Practice

CHAPTER 5

Unit III.12: Full-Mass Unseen Capstones

Worksheet III.45 — Variant A

Worksheet ID: III.45

Focus: Temporal capstone: Dominica XII post Pentecosten

Use: Use a clean 1962 Missal; no facing translation.

1. Inventory every text and direction in the formulary.

2. Cold-read all Propers; submit a clause map and lookup marks before opening a dictionary.

3. Analyze the Collect beginning *Omnipotens et misericors Deus*; identify the subject/content of *venit*.

4. Write an argument map for 2 Cor. 3:4–9 with at least six logical steps.

5. Answer six agent/action questions about Lc. 10:23–37 in simple Latin.

6. Audit forty sampled forms and your dictionary ledger.

Worksheet III.47 — Variant C**Worksheet ID:** III.47**Focus:** Common capstone: one martyr non-pontiff**Use:** Assessor chooses a feast not used above.

1. Identify exactly which texts are Proper and which are taken from *Commune unius Martyris non Pontificis*.

-
2. Write the saint's nominative and genitive and expand every N. in context.

-
3. Cold-read the complete formulary and classify vocabulary by witness, combat, reward, protection, and intercession.

-
4. Give prose-order reconstructions for the Collect, Secret, Postcommunion, and one chant verse.

-
5. Write ten Latin comprehension answers about agent, petition, reason, promised effect, and Gospel command.

-
6. Perform the forty-form and lookup audit.
-

Part V**Mastery Decision****CHAPTER 6**

Mastery and error record

Reason in one complete sentence:

Part VI

Answer Key

CHAPTER 7

How to Use the Keys

These keys diagnose grammatical decisions. Compare them only after completing the corresponding worksheet or assessment in ink. For a closed item, locate the form, function, government, or clause relation that decides the answer; a matching English paraphrase alone is not enough. For an open task, use the stated model and rubric to test morphology, syntax, idiom, and source control.

Some translations legitimately admit more than one English wording. An alternative is acceptable when it preserves the Latin agency, negation, time, dependency, and material ambiguity. Record a defensible alternative in the error ledger rather than changing it merely to imitate the model's style.

CHAPTER 8

Enrichment models and rubrics

The complete-Mass protocol — model and rubric

Connection. A complete read is a sequence of auditable decisions, not a long translation assignment.

Model / acceptable evidence. The model requires every finite frame, participant or antecedent uncertainty, and proposed lemma to be written before lookup. Missing one genre returns the learner to the inventory.

Dictionary thresholds — model and rubric

Connection. A lookup ceiling measures morphological independence only when repeated and false lookups remain visible.

Model / acceptable evidence. The audit counts only new content words as permitted lookups, but records avoidable and repeated failures separately. A rate without the word-count denominator or contemporaneous ledger is not accepted.

Assigned capstones — model and rubric

Connection. A second formulary tests transfer only when category, heading, and prior exposure are documented.

Model / acceptable evidence. A valid record identifies the physical Missal heading and honestly discloses exposure. Reused teaching material may diagnose fluency but cannot prove unfamiliar transfer.

Measurable final gate — model and rubric

Connection. Each domain protects a different failure mode, so strength in translation cannot erase weak morphology or reference.

Model / acceptable evidence. The model records earned/available evidence or the stated operational threshold for every domain. Averaging would allow a strong domain to conceal a structural failure that still prevents independent reading.

CHAPTER 9

Unit III.12: Full-Mass Unseen Capstones

Solution III.45 — Variant A

Worksheet ID: III.45

Focus: Temporal capstone: Dominica XII post Pentecosten

Use: Use a clean 1962 Missal; no facing translation.

- Inventory every text and direction in the formulary.
Answer / model: Key should list Introit, Collect, Epistle 2 Cor. 3:4–9, Gradual/Alleluia, Gospel Lc. 10:23–37, Offertory, Secret, Communion, Postcommunion, and applicable Ordinary/seasonal directions. Record actual page/rubric evidence.
- Cold-read all Propers; submit a clause map and lookup marks before opening a dictionary.
Answer / model: Model key checks that every finite verb is underlined, connectors circled, speech bounded, and proposed heads marked. No meanings need be polished; any pre-lookup erasure must remain visible.
- Analyze the Collect beginning *Omnipotens et misericors Deus*; identify the subject/content of *venit*.
Answer / model: The substantive *ut tibi a fidelibus tuis digne et laudabiliter serviatur* is what comes *de cuius munere*; the second *ut* gives the petition's desired result.
- Write an argument map for 2 Cor. 3:4–9 with at least six logical steps.
Answer / model: A correct model includes confidence through Christ, denial of self-sufficiency, sufficiency from God, ministry of the new covenant, letter/Spirit contrast, death ministry's glory, and the greater glory of the Spirit's ministry. Exact wording may vary; each step must cite Latin markers.
- Answer six agent/action questions about Lc. 10:23–37 in simple Latin.
Answer / model: Model content: disciples are blessed; a lawyer questions Jesus; a man descends and is wounded; priest and Levite pass; Samaritan has mercy and cares for him; Jesus commands similar action. Grammar need not imitate Vulgate complexity but must preserve agents and sequence.
- Audit forty sampled forms and your dictionary ledger.
Answer / model: Pass: at least 36/40 morphology/function; no more than ten new content-word lookups per five hundred words; each lookup shows proposed lemma, form, and function.

Solution III.47 — Variant C

Worksheet ID: III.47

Focus: Common capstone: one martyr non-pontiff

Use: Assessor chooses a feast not used above.

1. Identify exactly which texts are Proper and which are taken from *Commune unius Martyris non Pontificis*.
Answer / model: Key must cite headings and directions in the chosen 1962 Missal. “I recognize this text” earns no credit without the assignment trail.
2. Write the saint’s nominative and genitive and expand every N. in context.
Answer / model: All inserted forms must match their syntactic case. Also audit titles *Martyris/Confessoris* and pronouns; capitalization alone is not evidence.
3. Cold-read the complete formulary and classify vocabulary by witness, combat, reward, protection, and intercession.
Answer / model: Model accepts only lexemes actually present. Each entry must include lemma, form in passage, and construction; no prefilled thematic word may be claimed absent evidence.
4. Give prose-order reconstructions for the Collect, Secret, Postcommunion, and one chant verse.
Answer / model: Each reconstruction must retain every printed word, bracket every supply, attach relatives correctly, and name the rhetorical effect of one displaced element.
5. Write ten Latin comprehension answers about agent, petition, reason, promised effect, and Gospel command.
Answer / model: Pass: at least 9/10 preserve core content and at least 85% of clauses are grammatically defensible; simple Latin is preferred to copied Missal clauses without adaptation.
6. Perform the forty-form and lookup audit.
Answer / model: At least 36/40; ceiling five new content-word lookups per five hundred by the final attempt. A repeated ledger word counts twice.

Part VII

Scope and Sources

CHAPTER 10

Scope and Qualifications

10.1 Packet boundary

This is module EL-III.12, *Full-Mass Capstone*, in Triptych's print-first Ecclesiastical Latin curriculum. It imports one authoritative teaching unit, its local reference decisions, enrichment for each internal submodule, the selected worksheets named in the module plan, and the matching solutions. The printed core is one temporal capstone; the Common worksheet is deliberately delayed. EL-GATE-III, specifically M-C, remains the controlling unfamiliar two-Mass exit gate.

The unprinted worksheet variants remain course-owned extension material; their omission is intentional and is not a claim that the module exhausts available practice. Two focused sessions describe the packet's planned core, while the mastery gate and delayed recall determine advancement.

10.2 Corpus, text, and limits

The controlling reader is the 1962 typical edition of the *Missale Romanum*; the identified Clementine Vulgate and other ecclesiastical prose are supporting corpora. Running Latin normally uses consonantal *i*, the ligature *æ*, and no macrons. Received excerpts may normalize typography but are not diplomatic transcriptions unless labeled. Uncited short drills, transformations, and instructional models are project-composed; English translations and glosses are project translations unless identified otherwise.

This packet teaches language competence. It is not an official liturgical book, approved seminary curriculum, certification, pronunciation or ceremonial course, critical edition, or authority for a liturgical, theological, textual, or canonical judgment. Check received wording against the editions identified in the course-wide passage inventory.

10.3 Review, rights, and release state

Course-wide research records own the edition, passage, answer, curriculum, and source decisions; the leaf's module map records this packet's selection and enrichment. No independent Latinist, liturgist, pedagogue, theologian, or ecclesiastical reviewer is claimed. Page-image collation and the donor and liturgical-text distribution bases remain unresolved pre-installation gates. The packet therefore remains a working build on hold, not an installed or released publication.

CHAPTER 11

References

The following works are the course’s controlling corpus and reference aids. Project-composed explanation, translation, analysis, exercises, and models are distinguished from received wording under the convention stated in the Scope and Qualifications appendix. Short source passages are identified so that the learner can verify their wider context. The adjacent edition manifest and passage inventory record exact source roles, checks, access states, and known rights limits.

11.1 Primary corpus

- Catholic Church, *Missale Romanum ex decreto SS. Concilii Tridentini restitutum, Summorum Pontificum cura recognitum*, editio typica (Rome, 1962). A searchable presentation of the edition is hosted by the Holy See’s Biblia Clerus project: <https://www.clerus.org/bibliacclerusonline/EN/gmb.htm>.
- A page-image scan of the 1962 typical edition is available through the Church Music Association of America: <https://media.churchmusicassociation.org/pdf/missale62.pdf>. Page images, rather than unsourced transcriptions, should decide doubtful punctuation or spelling.
- The Clementine Vulgate is the principal biblical comparison corpus. The public-domain 1914 edition edited by Michael Hetzenauer and its provenance are described at <https://www.sacredbible.org/vulgate1914/>.

11.2 Grammar and lexicography

- J. H. Allen and J. B. Greenough, *New Latin Grammar for Schools and Colleges* (1903), a donor-declared public-domain reference whose digital locator was not independently consulted during integration: <https://archive.org/details/allengreenoughsn01alle>.
- Charles E. Bennett, *New Latin Grammar*, 1918 revision, Project Gutenberg eBook 15665; public-domain text in the United States: <https://www.gutenberg.org/ebooks/15665>.
- Charlton T. Lewis and Charles Short, *A Latin Dictionary* (1879), searchable transcription: <https://logeion.uchicago.edu/lexidium>.
- Charles du Fresne, sieur du Cange, *Glossarium mediae et infimae latinitatis*, a donor-declared later-vocabulary aid whose digital locator was not independently consulted during integration: <http://ducange.enc.sorbonne.fr/>.

The underlying 1903, 1918, 1879, and 1883–1887 printed works are public domain in the United States. Digital transcriptions and interfaces retain their own terms and are cited as access tools, not relicensed or reproduced wholesale. The 1962 Missal, Scripture, official text, and other received wording retain their own status; see the scope appendix, research records, and final-page rights notice.

Classical reference grammars describe the inherited system but do not by themselves explain every biblical or ecclesiastical development. The advanced volume therefore distinguishes classical baseline, Vulgate usage, later Christian usage, and stable liturgical formula instead of labeling every difference an “exception.”

11.3 Citation convention

Missal passages are cited by liturgical location and text genre rather than by a page number that varies among printings. Biblical texts are cited by book, chapter, and verse. Historical authors are cited by work and section wherever possible. A learner preparing a formal commentary should verify each passage against the edition actually being used and record any variant. These references are not a claim that every

historical-linguistic question can be settled by the listed school grammars and dictionary interfaces.
